## GENERAL DESCRIPTION

The vertical air conditioning units, range COMPACTAIR cooling only or heat pump are air conditioning unit, of the air to air type, designed for small and medium shopping center and housing.

The unit consists on an outdoor section and an indoor one and they may be supplied either as a compact unit or as a remote split and multi-split systems.

It is also possible supply the outdoor section alone, to match with other type of indoor unit that customer needs. They are designed for installation indoors or outdoors, and adequate to work in air ducts both sections. A wide range of optionals, completed-factory assembled are also available.

## FURNITURE

Made of galvanized steel sheeting with epoxy painted finish, weather proofed with high resistant to corrosion. The units are provided with metal profiles, capable of withstanding the unit and able as well of installing the unit mounted on the floor.

The panels are easily inter exchangeable, giving several air discharge alternatives.

Both sections are thermoacoustic insulated. An insulation with a mesh protection is used for indoor units with an M1 and F1 classification, certifying that the material is auto-extinguishable and avoiding smoke formed, which may get inside the room to be aconditioned.

For outdoor units, the insulation is auto-extinguishable and has a M1 classification.

## COMPRESSORS

All units are provided with hermetically sealed compressors, scroll type, cooled by exhaust gas, with internal thermal insulation inside the engine, so no other additional protection is required. The compressor is fitted on vibration mountings both inside and outside.

The compressors have a screwed connection into the pipe thus they can be more easily to assembled ( except 22E-44D models, with are weldeed) In heat pump units the compressors are provided as standard with a crankcase heater an is an option for cooling only units, to assist evaporation of the coolant retained by the oil in the compressor so that a suitable lubricate can take place.

## AIR FILTER

Washable air filter; auto extinguishable material with M1 classification.

## FANS

Inner sections are supplied with one or two "E" or "D" centrifugal fans respectively, fans are fitted with a common axle activated through an adjustable and variable pulley belt pulley with one activating motor. The outer fans are centrifugal type with built-in motor, except for models 32E-38E-64D-76D which have one or two centrifugal fans powered by one single motor built in with transmission by belts to one single axle.

## HEAT EXCHANGERS

Made of copper tubing with aluminum corrugated swirl fins, they are designed and specially dimensioned to obtain the maximum output so as to prevent ice forming in the outer heater, extending the operating cycles to a maximum obtaining maximum output and exchange on reducing the frequency of defrosting.

## COOLING CIRCUIT

Made of welded dehumidifying copper tube with plugged valves in the suction and liquid lines on both indoor and outdoor sections.

The units are supplied with high and low pressostat, with automatic reset.

Silencer fitted on the compressor discharge, and expansion system through a reducing valves. The heat pump units are equipped with dehumidifying filter to avoid liquid getting on the compressor, four way valve for reversing cycle, and one way valves.

## SWITCHBOARD

Designed according to EN 60204-1 normative. With protective fuses for compressors and fans, except for the ones adjustable and variable activating motor which are supplied with an external thermic relay.

The units have a built printed circuit board which controls the unit.

## GENERAL DESCRIPTION

## CONTROL

These units range are available in two different versions, depending on the digital thermostat supplied with the unit: These versions are:

1- **Standard unit version, supplied with two wires connection digital thermostat.**

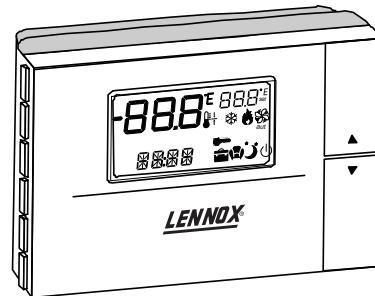

2- **VFC unit version, digital thermostat with possibility to install a BMS "building management systems"**

### 1- Standard unit version, digital thermostat with two wires connection.

Control made up with a printed control board and with a walled terminal thermostat to be placed in the room to be aconditioned; with ambient sensor inside the terminal for the regulation of the system.

With LCD display with **alarm visualization, exclusive connection with two wires between terminal thermostat and electrical box** at the unit, possibility to adjust internal parameters, automatical restarting and intelligent defrosting control adapted to ambient conditions and room demand at each moment (for heat pump units)

Digital thermostat corresponding to the standard unit version, with two wires connection.

### 2- VFC unit version, digital thermostat with possibility to install a BMS "building management systems"

Control made up with a printed control board and with a walled terminal thermostat to be placed in the room to be aconditioned; with ambient sensor inside the terminal for the regulation of the system, automatically restarting and intelligent defrosting control adapted to ambient conditions and room demand at each moment (for heat pump units).

Digital thermostat supplied with the VFC unit version, if digital inputs are not going to be used.

In both unit versions through the voltage free contacts supplied on, lets you to obtain the following functions:

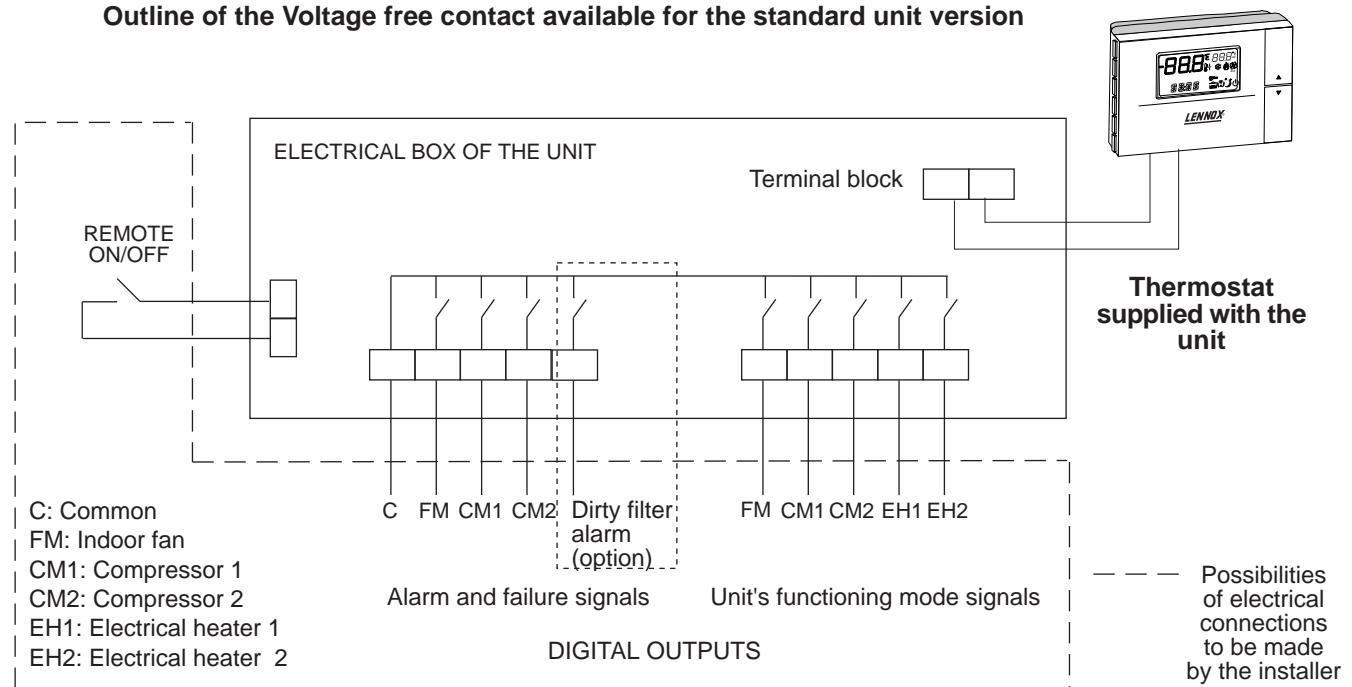

- To obtain the alarm signal of the units such as, fan OFF, compressor OFF...
- To know the unit function MODE; Unit running on fan, cooling or heating mode, compressor ON....

Also the VFC unit version, lets you make the connection from the printed control board at the electrical box of the unit, to manage the signals functioning of the unit, fan, cooling, heating, step 1, step 2 etc... to a BMS system "building management systems", and the connections will be the digital outputs of BMS system.

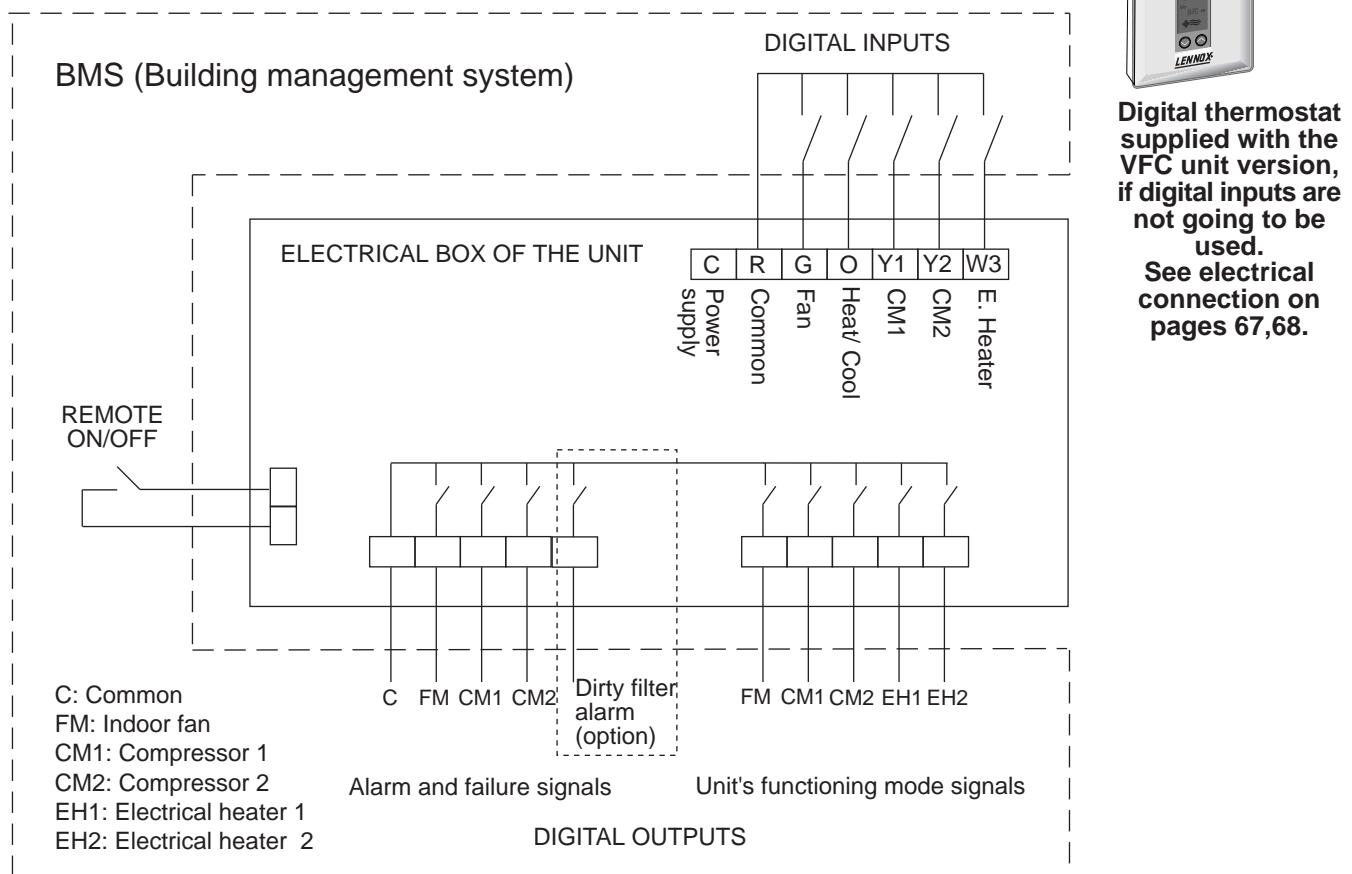

## GENERAL DESCRIPTION

The following outlines, shows, what we explain before, and corresponding of a double circuit units "D". For more details see electrical connections on this manual.

### Outline of the Voltage free contact available for the standard unit version

### Outline of the Voltage free contact available for the VFC unit version

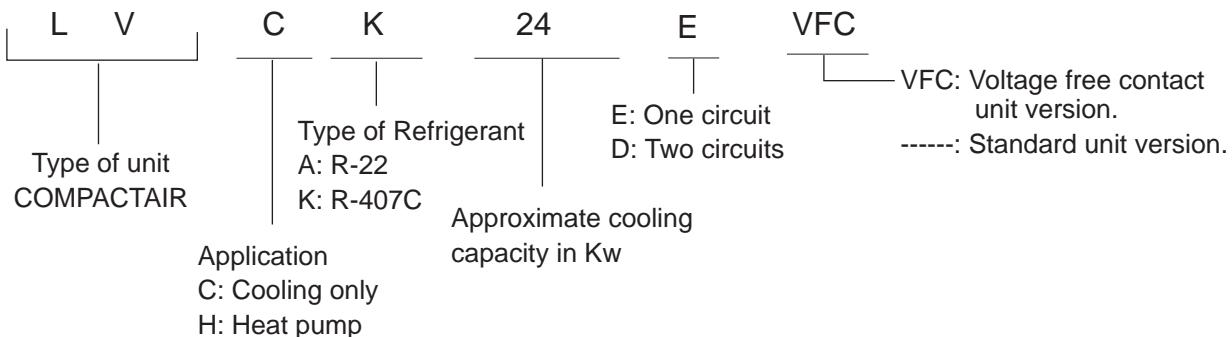

## GENERAL DESCRIPTION

## OPTIONS

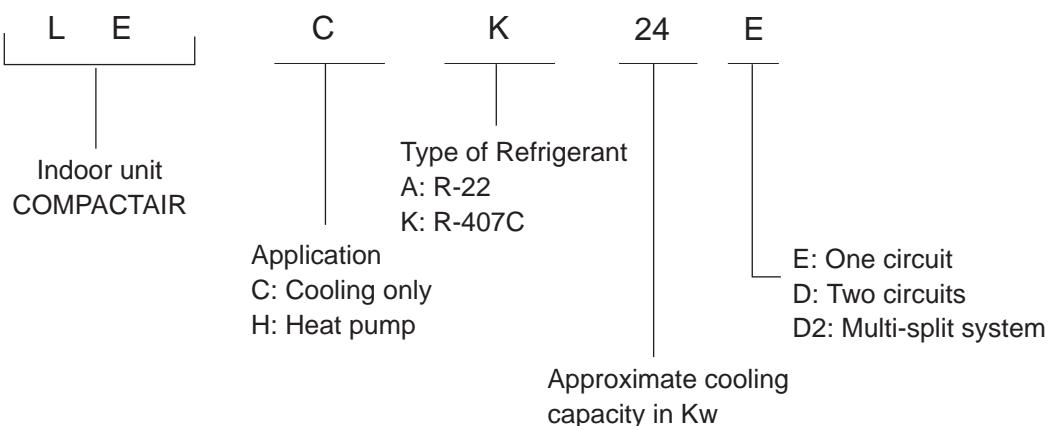

OPTIONALS	STANDARD VERSION	VFC VERSION	Remarks
Condensing pressure control ON/OFF	X	X	
Proportional condensing pressure control	X	X	Not available with kit vertical discharge on outdoor unit.
Main switch only for 400V-III	X	X	
Return lock three phases	X	X	
Crank case heater	X	X	For cooling only units, as standard on heat pump.
"Soft starter" 400V-III	X (except 100D)	X (except 100D)	Not available for 100D models, and only for 400V-III units.
Hot gas by pass	X (except 86D-100D)	X (except 86D-100D)	Not available for 86D-100D models.
Kit vertical discharge for outdoor units	X	X	Not available with kit proportional winter control.
Kit static pressure 350Pa (Air discharge) outdoor units	X	X	Available only for 22E-24E-28E-44D-48D-56D models.
Programmable thermostat	X	X	
Ambient remote sensor kit	X	X	
Duct remote sensor kit	X	X	
Electrical heater	X	X	Electrical heater is not available for heat pump double circuit units ("D") with thermostatic freecooling.
Hot water coil	X (except 86D-100D)	X (except 86D-100D)	Not available for 86D-100D models.
Kit freecooling thermostatic without extract fan supplied with sensor incorporated in the thermostat	X	NO	Thermostatic freecooling supplied with sensor incorporated inside the thermostat. Double circuit heat pump units "D", can not include electrical heater.
Kit freecooling thermostatic with extract fan supplied with sensor incorporated in the thermostat	X	NO	Thermostatic freecooling supplied with sensor incorporated inside the thermostat. Double circuit heat pump units "D", can not include electrical heater.
Kit freecooling enthalpic without extract fan supplied with wit duct sensor	NO	X	Enthalpic freecooling supplies with duct sensor.
Kit freecooling enthalpic with extract fan supplied with wit duct sensor	NO	X	Enthalpic freecooling supplies with duct sensor.
Kit sensor incorporated at thermostat for freecooling	NO	X	Option for freecooling
Kit duct sensor for freecooling	X	NO	Option for freecooling
Kit ambient sensor for freecooling	X	X	Option for freecooling
Kit more static pressure indoor unit 400 Pa	X	X	
180° turn of indoor unit	X (only units "D")	X (only units "D")	Only for packaged, double circuit units "D".
Dirt filter indication	X	X

## TRANSFORMATION OF AIR DISCHARGE

### UNITS MODELS LVCK-LVHK-LVHA 22E-24E-28E-32E-38E

DISCHARGE AIR STANDARD  
PACKAGED UNITS

DISCHARGE AIR OPTIONAL  
PACKAGED UNITS

1 Check that unit is electrically disconnected.

2 Unscrew and remove side covers (1) and (3).

3 Loosen the transmission belts and disassemble them.

4 Remove the pulley from the fan axle.

5 Remove the fan and their supports (2).

6 Turn the fan until horizontal discharge position is reached.

7 Replace the fan on the supports (2) which should not moved.

8 Place the pulley on the fan axle on the side which coincides with the motor: assemble the belts and align them.

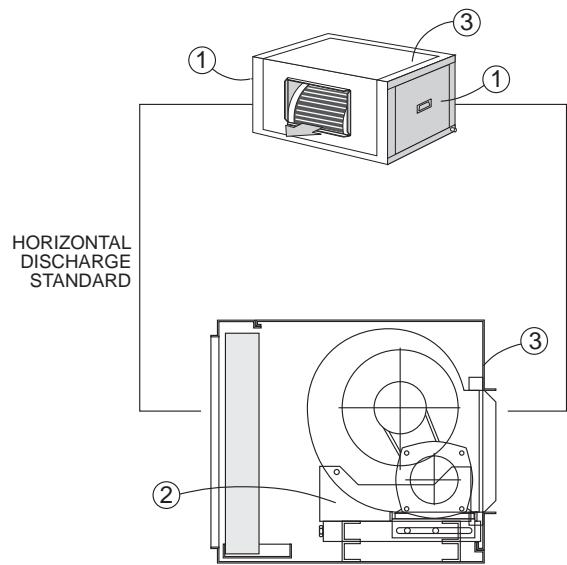

9 Tense the belts correctly.

10 Replace the upper and lateral covers and screw them down (1) and (3).

DISCHARGE AIR OPTIONAL  
SPLIT UNIT

1 Check that unit is electrically disconnected.

2 Unscrew and remove side covers (1) and (3).

3 Loosen the transmission belts and disassemble them.

4 Remove the pulley from the fan axle.

**ATTENTION!! Models 86D-100D; Unscrew the bottom bedplate.**

5 Remove the fan and their supports (2).

6 Turn the fan until horizontal discharge position is reached.

7 Replace the fan on the supports (2) which should not moved.

**ATTENTION!! Models 86D-100D; Screw the bottom bedplate.**

8 Place the pulley on the fan axle on the side which coincides with the motor: assemble the belts and align them.

9 Tense the belts correctly.

10 Replace the upper and lateral covers and screw them down (1) and (3).

## UNIT INSTALLATION

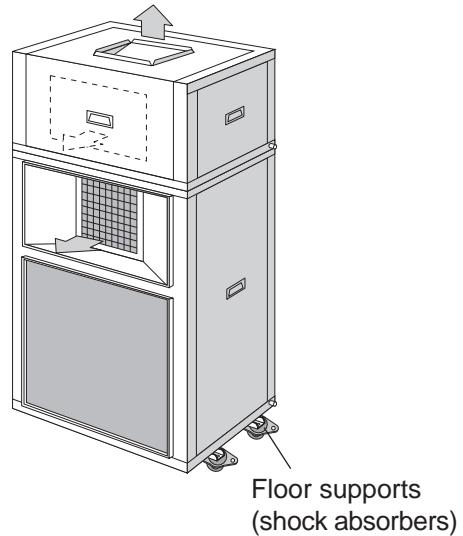

### UNIT LOCATION

- The bedplate is made up of two metal channels, capable of withstanding the weight of the units.

- If the unit is floor mounted, then the profiles should be isolated with shock absorbing material such as anti-vibration or pads. Keep in mind that fans rotate at approximately 850 rpm.

For the ones with variable pulley belts, see performances tables.

### UNIT INSTALLED ON SHOCK ABSORBERS

- The unit is able to work in normal radioelectronics conditions for commercials and residential installations. For any other conditions please consult.

- If the outside temperature in the area where the heat pump unit is to be installed is low or the cycle functioning are too long, it may necessary to install a electrical heater, bellow the likely coils on the drip tray, which avoid the causing of ice in the coil during defrost cycle.

- If the outdoor unit is going to be installed outside. It may be recommended to install isolation around the panel of electrical box, to make sure it became hermetic.

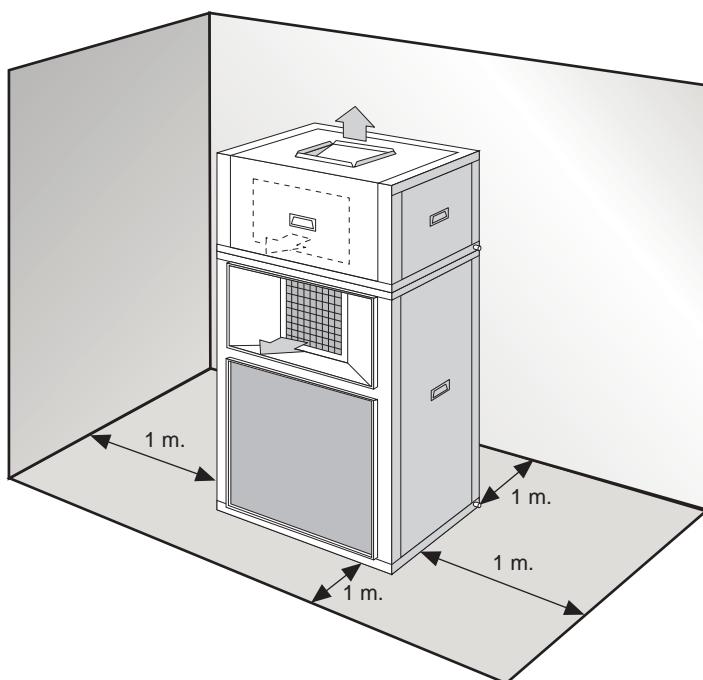

## UNIT INSTALLATION

### INSTALLATION CLEARANCES

Clearance around the unit for service and maintenance.

#### SERVICE SPACE

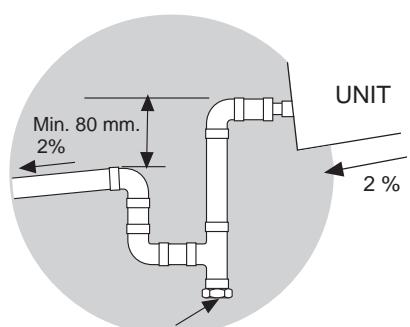

Space should be left free for access or servicing, to case the installation of cables, drainage connections, electric installation and cleaning filters, as well as easy access to the unit.

### DRAINS

All the indoor and outdoor sections of these units have a  $\frac{3}{4}$ " steel threaded drain pipe welded to the condensation tray.

Drainage pipes will be fitted for each tray through a siphon with a height difference of 80 mm. to avoid drainage problems from the depression formed by the fans. The pipes should have an inclination of 2% to ease drainage of condensation. The connections the units are pipes with exterior screw thread of 3/4 (Tap).

Inspection and cleaning stopper.

Also slightly tip the unit (2%) toward the drainage side. Check that the condensation trays are clean and free from dirt and other debris from the works and that water drains correctly.

## REFRIGERANT CONNECTIONS

### SPLIT OR MULTI-SPLIT SYSTEM

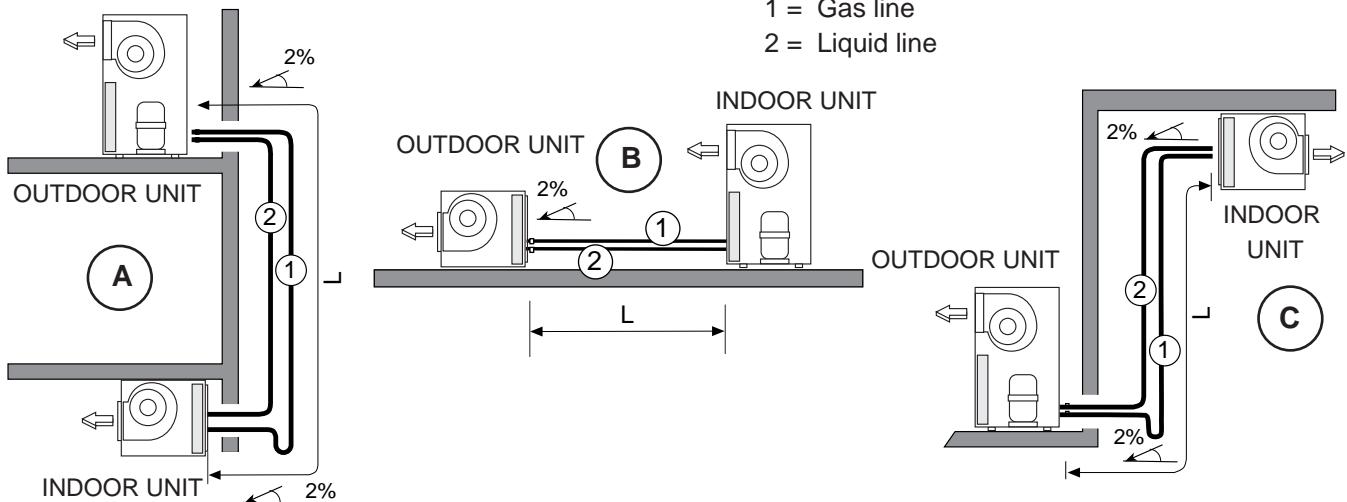

To locate the outdoor and the indoor units, refer to the following information:

#### A,B,C : Unit positions

L : Total length

1 = Gas line

2 = Liquid line

**POSITION A :** A siphon suction must be installed on the vertical line of the gas line, and siphons must be installed every 8 meters upward. The minimum speed suction must be below 6m/s.

**POSITION B :** Tip the lines toward the outdoor unit. Make special attention to line length longer than 10m

**POSITION C :** Install a siphon at the base of the vertical of the gas line, no more siphons are necessary.

TABLE 1: REFRIGERANT LINES SELECTION

REFRIGERANT LINES			UNIT - MODEL

Maximum vertical line length (m.)			16	16	16	16	16	16	16	16	16	16	16	16	16		
Maximum number of bends			12	12	12	12	12	12	12	12	12	12	12	12	12		

- THE GAS LINE ALWAYS MUST BE INSULATED

- THE HORIZONTAL LINES MUST BE TYPED AT LEAST 2% TOWARD THE OUTDOOR UNIT

- THE MAXIMUM SPEED INSIDE LINES, NOT SHOULD BE MORE THAN 15 m/seg.

Between length of 30 and 50 m superior you have to make a recalculation according to our technical commercial department or distribution itself to maintain determinated aspects how to make the installation (additional charge of oil, selenoide valves etc.....)

SPLIT OR MULTI-SPLIT SYSTEM

PRECAUTIONS TO BE TAKEN IN THE USE OF R-407C Refrigerant

If R-407C Refrigerant is used in the unit, the following precautions characteristic of this gas should be taken:

- The Vacuum Pump must have a Check Valve or Solenoid Valve.
- Pressure Gauges and Hoses for the exclusive use with R-407C Refrigerant should be used.
- The charge should be carried out in the Liquid Phase.
- Always use scales to weight-in charge- Use the Leak Detector exclusive for R-407C Refrigerant.
- Do not use mineral oil, only synthetic oil to ream, expand or make connections.
- Keep pipes wrapped before using them and be very thorough about any possible dirt (dust, filings, burrs, etc.).
- When there is a leak, gather what is left of the charge, create a vacuum in the unit and completely recharge with new R-407C Refrigerant.
- Brazing should always be carried out in a nitrogen atmosphere.
- Reamers should always be well sharpened.

## REFRIGERANT CONNECTIONS

**TABLE 2: CHARGE OF REFRIGERANT FOR PACKAGED SYSTEM**

The units are factory pre-charged with the following refrigerant charge:

Charge of refrigerant (gr) R-22 LVHA									
22E	24E	28E	32E	38E	44D	48D	56D	64D	76D
6000	6550	7500	8900	10900	12000	13100	15000	17800	21800

Charge of refrigerant (gr) R-407C LVCK / LVHK										
	22E	24E	28E	32E	38E	44D	48D	56D	64D	76D
LVCK	5100	5600	6700	7600	9500	10200	11200	13400	15200	19000
LVHK	5700	6250	7400	8450	10500	11400	12500	14800	16900	21000

**TABLE 3: CHARGE OF REFRIGERANT FOR SPLIT SYSTEM**

Indoor and outdoor units are factory pre-charged with **Nitrogen (N<sub>2</sub>)**. The installer should remove this gas and charge the units with the refrigerant R - 22 or R - 407C show on the following table and also the charge per meter line on table 5.

Charge of refrigerant (gr) R-22 for 0 meters of line KVHA + LEHA											
22E	24E	28E	32E	38E	44D	48D	56D	64D	76D	86D	100D
6000	6550	7500	8900	10900	12000	13100	15000	17800	21800	24400	28000

Charge of refrigerant (gr) R-407C for 0 meters of line KVCK + LECK											
22E	24E	28E	32E	38E	44D	48D	56D	64D	76D	86D	100D
5100	5600	6700	7600	9500	10200	11200	13400	15200	19000	21200	23600

Charge of refrigerant (gr) R-407C for 0 meters of line KVHK + LEHK											
22E	24E	28E	32E	38E	44D	48D	56D	64D	76D	86D	100D
5700	6250	7400	8450	10500	11400	12500	14800	16900	21000	23400	26000

**TABLE 4: CHARGE OF REFRIGERANT FOR MULTI-SPLIT SYSTEM**

Indoor and outdoor units are factory pre-charged with **Nitrogen (N<sub>2</sub>)**. The installer should remove this gas and charge the units with the refrigerant R - 22 or R - 407C show on the following table and also the charge per meter line on table 5.

Charge of refrigerant (gr) R-22 KVHA + 2 x LEHA						
44D2	48D2	56D2	64D2	76D2	86D2	100D2
2 x 6000	2 x 6550	2 x 7500	2 x 8900	2 x 10900	2 x 12200	2 x 14000

Charge of refrigerant (gr) R-407C KVCK + 2 x LECK						
44D2	48D2	56D2	64D2	76D2	86D2	100D2
2 x 5100	2 x 5600	2 x 6700	2 x 7600	2 x 9500	2 x 10600	2 x 11800

Charge of refrigerant (gr) R-407C KVHK + 2 x LEHK						
44D2	48D2	56D2	64D2	76D2	86D2	100D2
2 x 5700	2 x 6250	2 x 7400	2 x 8450	2 x 1500	2 x 11700	2 x 13000

### CHARGE OF REFRIGERANT FOR THE SET:

#### EXAMPLE:

To install a KVHK 38E + LEHK 38E set, with a 22m refrigerant line length between outdoor and indoor unit, then the refrigerant charge must be calculated as follow:

1º Type of refrigerant R-22 or R-407C, in this case, R-407C .

2º The TABLE 5 shows, that for 22m of line length between indoor unit and outdoor unit, the line sizes are, liquid 7/8", and gas 1-5/8".

3º TABLE 5 shows, for line sizes of 7/8"- 1-5/8", the charge per meter line is: 327 gr/m.

4º TABLE 3 shows, charge of refrigerant for the set with 0m of line length is 10.500gr.

5º To determinate the charge of the set:

Add charge of the refrigerant lines + charge of refrigerant indoor unit and outdoor unit.

Total charge for the set: (327 gr/m) x 22m + 10.500 gr = 17694 gr

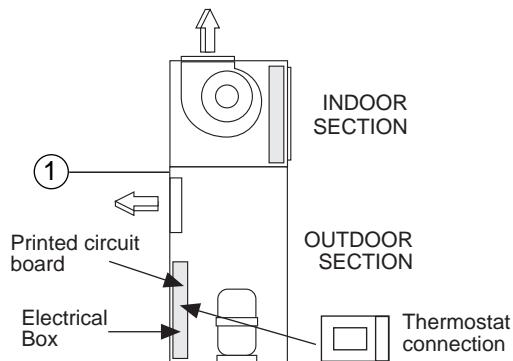

## ELECTRICAL CONNECTION

### PACKAGED UNIT

- BEFORE MAKING ANY ELECTRICAL CONNECTIONS, BE SURE THAT ALL CIRCUIT BREAKERS ARE OPEN.
- IN ORDER TO CARRY OUT THE ELECTRICAL CONNECTIONS, FOLLOW THE ELECTRICAL DIAGRAM SUPPLIED WITH THE UNIT.

- ① Power supply to the unit.

POWER SUPPLY 230V THREE-PHASE UNITS	
	X1
3 ~ 230V - 50 Hz + PE	

UNIT MODEL	Nr OF CABLES X SECTION (mm <sup>2</sup> )	
	① Power supply without electric heater	① Power supply with electric heater
22E	4 x 10	4 x 25
24E	4 x 10	4 x 25

64D	5 x 25	5 x 35
76D	5 x 25	5 x 50

- Connect the power supply cables to the terminals in the electric box through the grommet.
- The sections have been calculated for a length no longer than 50m and a voltage drop of 10V.  
Do not start the unit if the drop is greater than this.
- The wiring and circuit breakers to be mounted in the installation must comply with the Regulations in force.
- Ground wires must be properly connected and have a greater length than the phase wires.

## ELECTRICAL CONNECTION

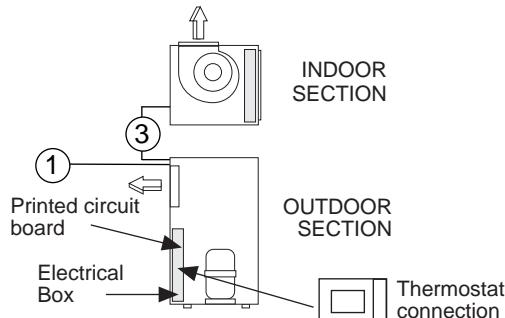

### SPLIT UNIT

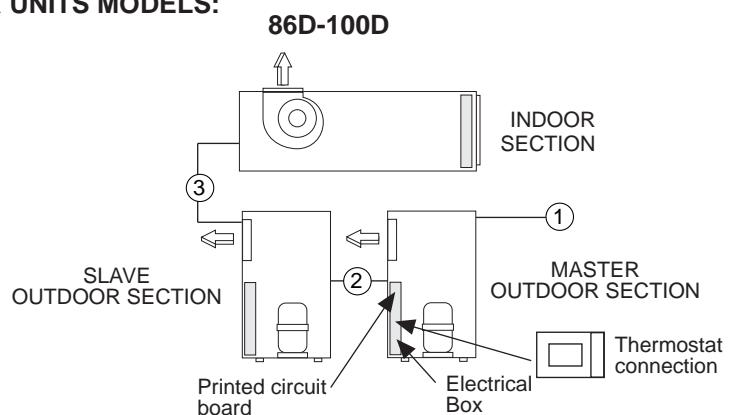

- BEFORE MAKING ANY ELECTRICAL CONNECTIONS, BE SURE THAT ALL CIRCUIT BREAKERS ARE OPEN.
- IN ORDER TO CARRY OUT THE ELECTRICAL CONNECTIONS, FOLLOW THE ELECTRICAL DIAGRAM SUPPLIED WITH THE UNIT.

- ① Power supply.
- ② Electrical connection between outdoor units.
- ③ Indoor motor fan electrical connection.

### CONTROL PANEL

#### ELECTRICAL CONNECTION DIGITAL THERMOSTAT, FOR STANDARD UNIT VERSION

**IMPORTANT**  
THE SHIELDED CONNECTION CABLE BETWEEN THE CONTROL PANEL AND THE UNIT MUST BE SEPARATE FROM ANY OTHER TYPE OF ELECTRICAL WIRING.  
CONNECT IT TO THE ELECTRIC BOX LOCATED IN THE OUTDOOR UNIT.

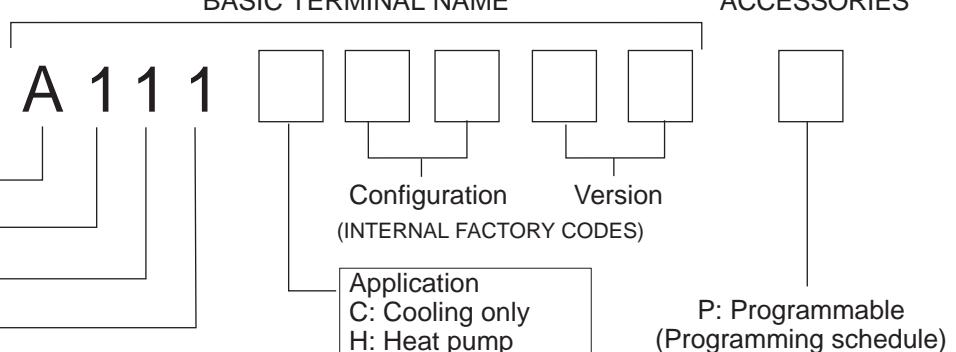

- For securing and connecting the Control Panel, consult the control Panel Manual supplied with the unit.
- Keep in mind that the Control Panel cable is a SHIELDED CABLE and the wire mesh is only grounded through the electric box.
- The T+ and T- polarity must strictly agree with the electrical diagram supplied with the unit.

Since this type of control panel is factory-configured for each application, an identification code located on the control panel of the terminal itself has been given to each panel.

**i** Any query or request for a replacement of the control panel must be accompanied by this identification code.

#### IDENTIFICATION CODE FOR THE CONTROL PANEL

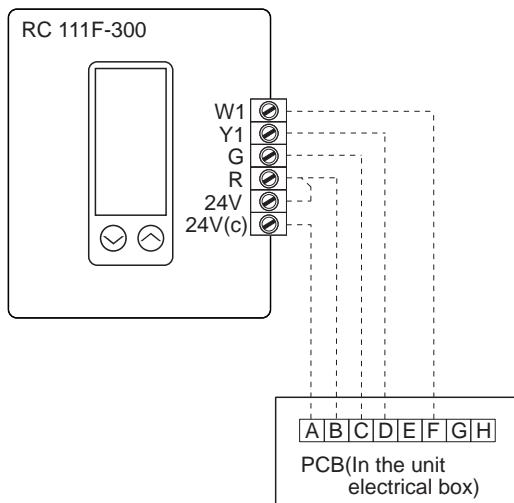

## ELECTRICAL CONNECTION

### ELECTRICAL CONNECTION " REMOTE SIGNALS"

The electrical box of all the range, lets you obtain the following functions:

- Remote ON / OFF.
- Alarm and failure signals for the unit's components: FM, CM.
- The unit's functioning mode signals: FM, CM, EH.
- Dirty air filter indication (option).
- Manage the unit operation, through the supplied thermostat or through the digital inputs for a BMS system (Only for VFC unit version).

C: Common

FM: Indoor fan

CM: Compressor

CM1: Compressor 1

CM2: Compressor 2

EH1: Electrical heater 1

EH2: Electrical heater 2

When unit switch off, the system will show CM, CM1 Y CM2 failure signal.

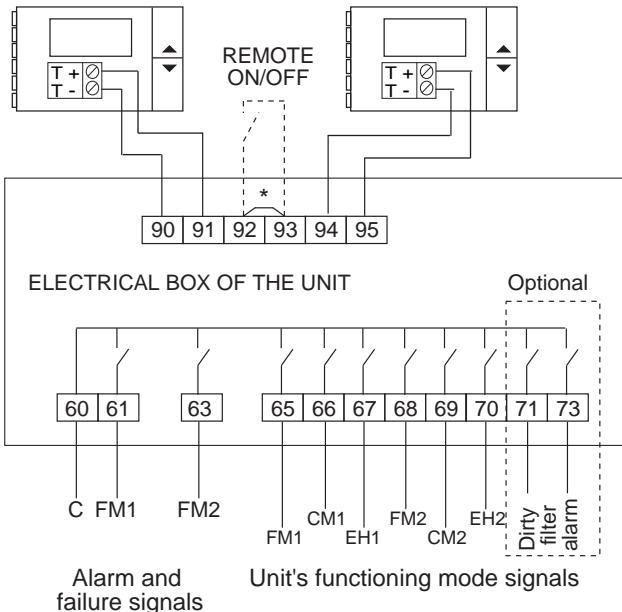

\* Remove wire, if ON/OFF remote is used.

## ELECTRICAL CONNECTION

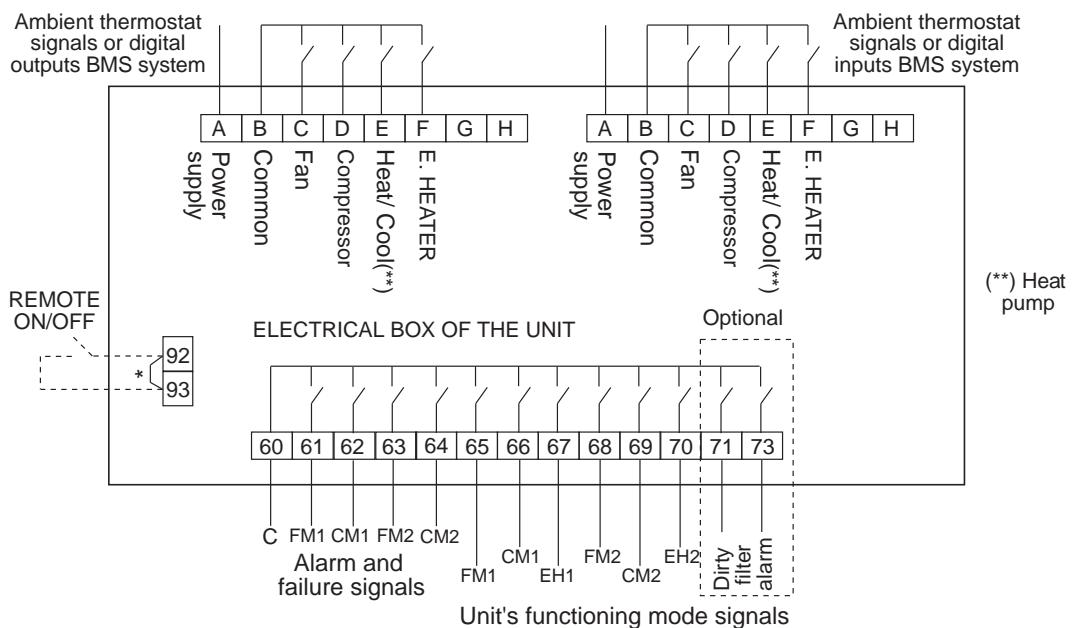

### ELECTRICAL CONNECTION "REMOTE SIGNALS" MULTI-SPLIT SYSTEMS

#### STANDARD VERSION UNIT MULTI-SPLIT SYSTEM

Thermostat connection

#### VFC VERSION UNIT MULTI-SPLIT SYSTEM

C: Common

FM: Indoor fan

CM1: Compressor 1

CM2: Compressor 2

EH1: Electrical heater 1

EH2: Electrical heater 2

When unit switch off, the system will show CM1 and CM2 failure signal.

\* Remove wire, if ON/OFF remote is used.

## OPERATING LIMITS

### OPERATING LIMITS FOR (COOLING ONLY) UNITS

		MAXIMUM TEMPERATURES	MINIMUM TEMPERATURES
COOLING CYCLE OPERATION	INDOOR TEMPERATURE	32° C DB / 23°C WB	21° C DB / 15°C WB
	OUTDOOR TEMPERATURE	DEPENDING ON MODEL (TABLE 1)	+ 19° C STANDARD UNIT 0° C WITH OPTIONAL CPC ON/OFF -10°C (*)

(\*) With kit hot gas by pass or proportional winter control (options)

## OPTIONS

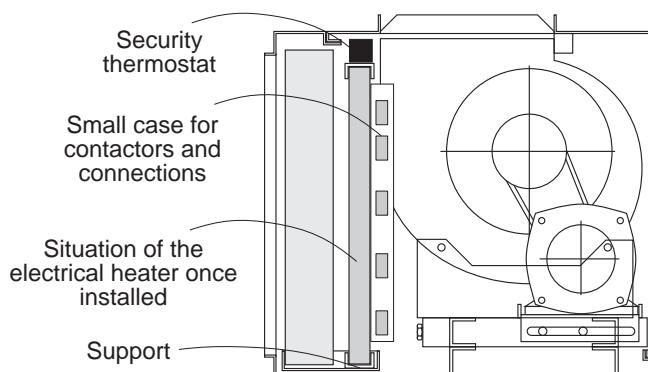

### ELECTRICAL HEATER

Made of alumin shielded elements, supplied mounted on the unit as drawing shows.

All the range have three security elements: 2 security thermostat, one automatic other manual reset and an air flow security pressostat, which make the electrical heater stops when air flow is not enough.

The electrical heater must be supply on from the unit's electrical box.

An small case on the electrical heater protects contactors and electrical connections.

MODELS LEC (INDOOR UNIT)	22E-24E-28E-32E-38E			43E-50E		44D-48D-56D-64D-76D				86D-100D

### DIRTY FILTER INDICATION

To install on the indoor unit.

Based on an air flow security pressostat which detect, the static pressure available through the air filter.

In case the filters are dirties, the detector is activate, showing an alarm, if the fan is ON.

### MAIN SWITCH

The main switch is located on the access panel to the electrical box of the outdoor unit. (Except 86D-100D models) The main switch is endowed with a clutch gadget, which allows open the panel of the electrical box, when it is on OFF position.

**ATTENTION! WITH MAIN SWITCH ON. DO NOT REMOVE THE PANEL**

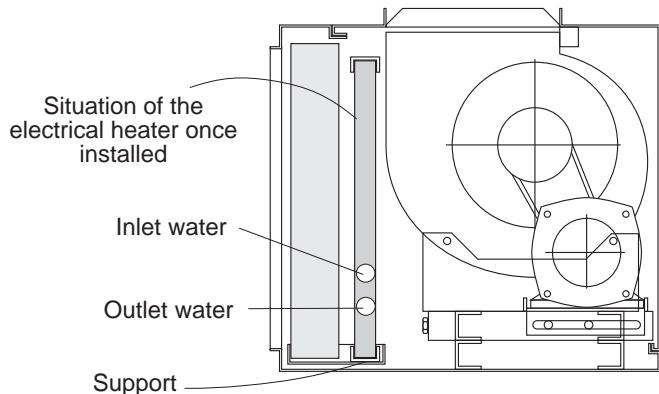

Check to make sure that the main switch is large enough to handle the current for the unit if electric heaters are installed.

## OPTIONS

### HOT WATER COIL

Base on a refrigerating coil, made of copper tubing with aluminum swirl fins with inlet and outlet water connections.

It is supply mounted inside the unit as picture shows.

MODELS LEC / LEH INDOOR UNIT	DIFFERENCE IN TEMPERATURES BETWEEN HOT WATER INTAKE AND THE AIR WHICH ENTERS THE BATTERY			WATER FLOW L/H	WATER COIL PRESSURE DROP Kpa	AIR PRESSURE DROP Pa (*)	Nr ROWS	WEIGHT Kg	OUTLET WATER DIAMETER Inches

(\*) Nominal air flow volume

### PHASE SEQUENCER

The phase sequencer is located in the electrical box in the outdoor section, thus assuring that the unit will not begin operation while the phase connection of the compressor is not correct. Should this occur, then just switch two phase connections.

### ON/OFF CONDENSATION PRESSURE CONTROL

The condensation pressure control consists of one or two pressures switch, which starts and stops the outdoor fan regulating the condensation temperature, thus the unit will be able to operate in the cooling cycle when the outdoor temperature is below 19°C, (Until 0°C).

### CRANK CASE HEATER (COOLING-ONLY UNITS)

The purpose of the heater is to keep the oil in the compressor at the correct temperature while the compressor is stopped so that it can be properly lubricated when started again.

When the unit is operating at low outdoor temperatures (indoors 19°C), it is advisable to fit a crankcase heater.

### COMPRESSOR STARTING CURRENT CONSTRAINED ("SOFT STARTER") 400V-III

Is an electronic element, which reduce the pick compressor starting current up to 40%

(see pages of electrical data without soft starter)

Not available for 100D units.

Only available for 400V-III units.

MODELS (OUTDOOR UNIT)	WEIGHTS (*)

## OPTIONS

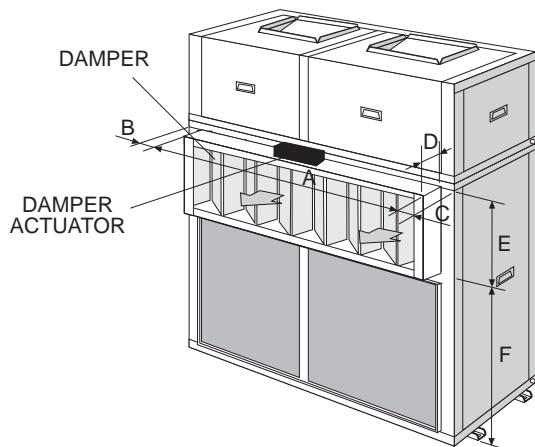

### PROPORTIONAL CONDENSING PRESSURE CONTROL BY DAMPERS

Based on one or two dampers located on the outdoor unit discharge air, which lets you controls condensation temperature through the air flow. The damper is moving by a servomotor, which receives a proportional signal through a pressure detector.

**⚠️** This kit is not available with kit vertical discharge outdoor unit at the same time.

Thus the unit will be able to operate in the cooling cycles when the outdoor temperature is bellow 19°C.

Dimensions of dampers for this kit:

## OPTIONS

### HOT GAS BYPASS VALVE

The purpose of the BYPASS valve is to make it possible for the unit to operate at low outdoor temperatures (under -10°C), to be used in cooling-only and head-pump units.

It regulates the capacity of the compressor by injecting hot gas from the compressor discharge side to the coil.

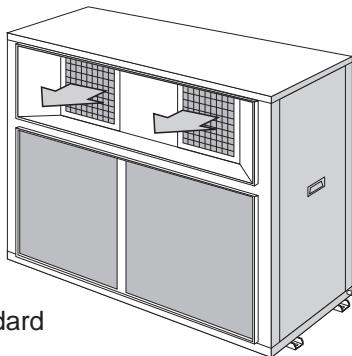

### KIT VERTICAL DISCHARGE FOR OUTDOORS UNITS, (only for split and multi-split systems)

It is a set of accessories to adapt casing, making the outdoor air discharge become vertical

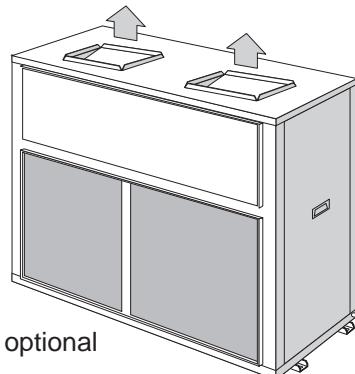

See dimensions section for performances.

This kit is not available with kit proportional condensing pressure control at the same time.

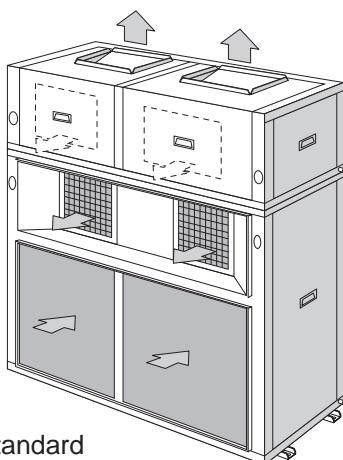

Placement standard

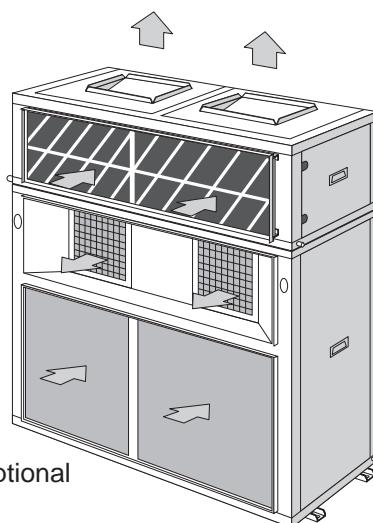

Placement optional

### 180° TURN OF INDOOR UNIT (Only for package double circuit units "D")

The unit is supplied such as, the return air to the indoor section and the intake air discharge air for the outdoor are located on the same side of the unit.

Placement standard

Placement optional

### CONTROL USING A PROGRAMMABLE CONTROLLER:

With the programmable controller option, the desired temperature can be programmed in the area 24 hours a day, 7 days a week.

### REMOTE AMBIENT SENSOR AND REMOTE DUCT SENSOR

This sensors may be used in conjunction with remote controller or allowing the controller to be mounted in a room away from the conditioned space.

- **REMOTE DUCT SENSOR:** The sensor will be located in the return-air duct, detecting the air temperature of the air being air-conditioned.
- **REMOTE AMBIENT SENSOR:** The sensor will be placed in the area to be air-conditioned.

## OPTIONS

### FREECOOLING

#### 1.- DEFINITION

FREE-COOLING is a saving system in the Cold cycle, this makes the unit take air from the outside to take advantage of its energy, this system acting as a first cold stage.

It is a saving energy system that's why many countries regulations recommended and others put under an obligation to install a freecooling system with the unit.

#### 2.- TYPES OF FREECOOLING.

In order to outside air parameters which has to be measured, the types are:

##### - Thermostatic freecooling :

Measures and comparing the outside air temperature, with the temperature of the room that has to be aconditioned.

##### - Enthalpic freecooling :

Measures and comparing the outside air enthalpy, with the return air enthalpy from the room that has to be aconditioned.

The enthalpy measures temperature and humidity of air.

#### 3.- COMPONENTS OF FREECOOLING.

The main components are:

-Electronic control and accessories: Their function is to detect the outside and indoor air conditions through the probes, to solve when freecooling should operate

-The servomotor and system transmission: They manage open and close the dampers

- Adjustable dampers

-Mixing section: Where outside and return air are mixed.

Also an extra fan is available, which applied an additional static pressure on the suction and return air duct.

For more details about components and drawings see pages 78,79,80,81.

#### 4.- OPERATION

The control compares the values of temperature/enthalpy between outside air and room air through the probes, if it is a negative difference and the security elements allows (discharge temperature probes) then the control acts over the servomotor, which produces the opening of the outside damper and close the return one, entering cool outside air to the room.

The damper regulation is proportional.

If indoor air demand is not great, could be enough only the freecooling to aconditioned the room, if the air demand is greater it is possible need the freecooling working and the unit working on different cooling mode stages.

#### 5.- THERMOSTAT TERMINAL .

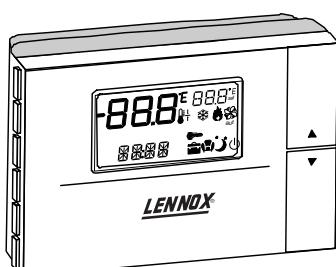

Depends on the type of freecooling selected, the thermostat and the electrical box supplied with the unit will be different.

With thermostatic freecooling the thermostat supplied has the same characteristics than the one supplied with the standard unit, except because the one for the freecooling is a programmable one.

With enthalpic freecooling the terminal is different than the one supplied with the unit VFC version, its principal characteristics are: OFF, COOL, HEAT, AUTOMATIC.

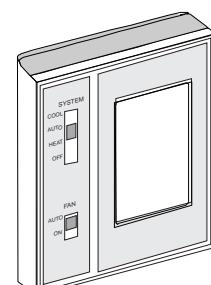

##### THERMOSTAT FOR THERMOSTATIC FREECOOLING

Thermostatic freecooling is supplied with sensor incorporated inside the thermostat.  
Remote duct and ambient sensor are available as an option.

##### THERMOSTAT FOR ENTHALPIC FREECOOLING

Enthalpic freecooling is supplied with duct sensor. Remote ambient sensor and sensor incorporated inside the thermostat are available as an option.

## OPTIONS

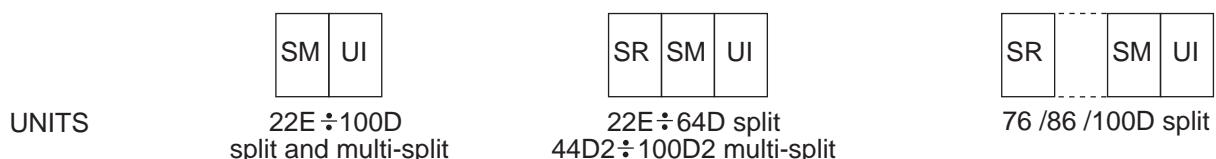

### FREECOOLING

#### 5.- SUPPLIED AND INSTALLATION

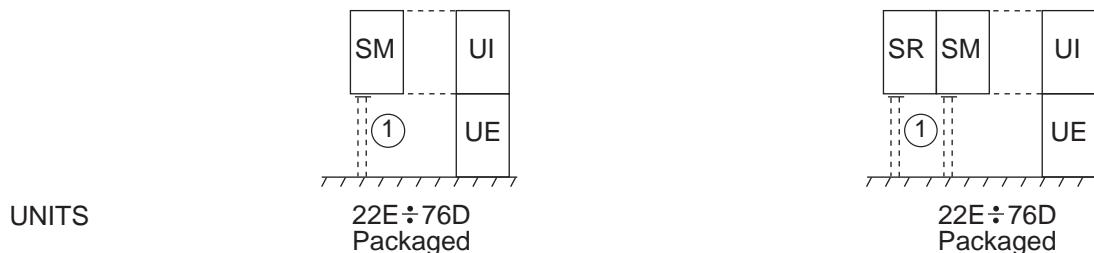

The freecooling system could be supplied mounted or loose, depends on the unit required packaged, split or multi-split.

Configuration of freecooling supply :

- Split and multi-split units:

- Packaged units

SM: Mixing section

SR: Extra fan section

UI: Indoor unit.

UE: Outdoor unit.

----- Mechanical installation to be carried out by the installer

- ① Freecooling supports, to be carried out by the installer

The electrical box for the freecooling is supplied apart and has to be fixed by the installer.

#### 6.- FREECOOLING WITH EXTRA FAN

If an extra static pressure is required on the return air duct, the freecooling should add an extra fan section. This extra fan section, include a discharge damper.

The operation dampers for this freecooling with extra fan is as follow:

As much as the air intake damper opens, that much the by-pass damper closes and the discharge air damper opens, for the air return suction (see drawing)

This means that at the same time reach a free cooled of the room, the discharge or return air and the air of the room gets removable.

The consumption of the extra fan by unit is:

### FREECOOLING

#### 7.- SELECTION OF THE UNIT AND FREECOOLING SYSTEM

There are different types of freecooling system , different possibilities of dampers installations, and it could be supplied mounted or loose.

In order to provide the customer the needed one, fill in the following table and sent it to the order department:

INSTALLER COMPANY NAME \_\_\_\_\_ CONTACT PERSON NAME: \_\_\_\_\_

TEL.: \_\_\_\_\_ Fax \_\_\_\_\_ e-mail \_\_\_\_\_

ATTENTION TO : Lennox Refac S.A. CONTACT PERSON NAME: \_\_\_\_\_

TEL.: \_\_\_\_\_ Fax \_\_\_\_\_ e-mail \_\_\_\_\_

ORDER NUMBER: \_\_\_\_\_

A- Select the unit needed, packaged, split or multi-split:

(If the unit needed is packaged, the freecooling will be supplied loose. If the unit selected is split or multi-split the freecooling will be supplied mounted on the indoor unit, except for the freecooling with extra fan on models 76D-86D-100D, which is supplied loose also)      Packaged       Split       Multi-split

B- Select the air flow drive of the indoor unit required: Horizontal or vertical

Packaged units: As standard vertical air flow drive

Split and multi-split systems: As standard horizontal air flow drive

Vertical

Horizontal

C.-Select the type of freecooling thermostatic or enthalpic and the sensor for freecooling management.

Thermostatic freecooling supplied with sensor incorporated inside the thermostat,

Enthalpic freecooling supplied with duct sensor

(If the humidity conditions where the unit is going to be install have relevance, is convenient to install an enthalpic freecooling)

Remote ambient sensor

Remote ambient sensor

Termostatic

Remote duct sensor

Enthalpic

Sensor incorporated at the thermostat

D.- Select if you need extra fan with the freecooling

With extra fan

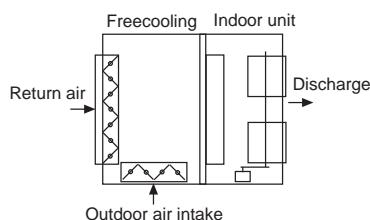

Without extra fan

E.-Select the dampers configuration for the freecooling, as following. (In order to be adapted to the ducts of the installation)

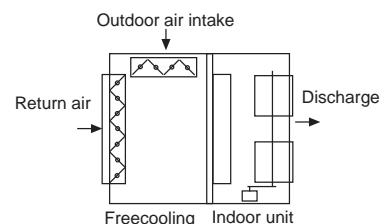

E.1- Dampers position of the dampers on for freecooling WITHOUT extra fan:

The drawings are an upper view of the indoor unit and freecooling
