GENERAL DESCRIPTION

The vertical air conditioning units, range AIRCOOLAIR cooling only or heat pump are air conditioning units, of the air to air type, designed for small and medium shopping center and housing.

The unit consists on an outdoor section and an indoor one and they may be supplied either as a compact unit or as a remote split and multi-split systems.

It is also possible supply the outdoor section alone, to match with other type of indoor unit that customer needs.

They are designed for installation indoors or outdoors, and adequate to work in air ducts both sections.

A wide range of optionals, completed-factory assembled are also available.

FURNITURE

Made of galvanized steel sheeting with epoxy painted finish, weather proofed with high resistant to corrosion. The units are provided with metal profiles, capable of withstanding the unit and able as well of installing the unit mounted on the floor.

Both sections are thermoacoustic insulated. An insulation with a mesh protection is used for indoor units with an M1 and F1 classification, certifying that the material is auto-extinguishable and avoiding smoke formed, which may get inside the room to be conditioned.

For outdoor units, the insulation is auto-extinguishable and has a M1 classification.

COMPRESSORS

All units are provided with hermetically sealed compressors, scroll type, cooled by exhaust gas, with internal thermal insulation inside the engine, so no other additional protection is required. The compressor is fitted on vibration mountings both inside and outside.

The compressors have a screwed connection into the pipe thus they can be more easily to assembled. In heat pump units the compressors are provided, as standard, with a crankcase heater (optional for cooling only units), to assist evaporation of the coolant retained by the oil in the compressor so that a suitable lubrication can take place.

AIR FILTER

Washable air filter; auto extinguishable material with M1 classification.

FANS

Inner sections are supplied with one or two "E" or "D" centrifugal fans respectively, fans are fitted with a common axle activated through an adjustable and variable pulley belt pulley with one activating motor. The outer one and two fans are axial type.

HEAT EXCHANGERS

Made of copper tubing with aluminum corrugated swirl fins, they are designed and specially dimensioned to obtain the maximum output so as to prevent ice forming in the outer heater, extending the operating cycles to a maximum obtaining maximum output and exchange on reducing the frequency of defrosting.

COOLING CIRCUIT

Made of welded dehumidifying copper tube with plugged valves in the suction and liquid lines on both indoor and outdoor sections.

The units are supplied with high and low pressostat, with automatic reset.

Silencer fitted on the compressor discharge, and expansion system through a reducing valves. The heat pump units are equipped with dehumidifying filter to avoid liquid getting on the compressor, four way valve for reversing cycle, and one way valves.

SWITCHBOARD

Designed according to EN 60204-1 normative. With protective fuses for compressors and fans, except for the ones adjustable and variable activating motor which are supplied with an external thermic relay.

The units have a built printed circuit board which controls the unit.

GENERAL DESCRIPTION

CONTROL

These units range are available in two different versions, depending on the digital thermostat supplied with the unit: These versions are:

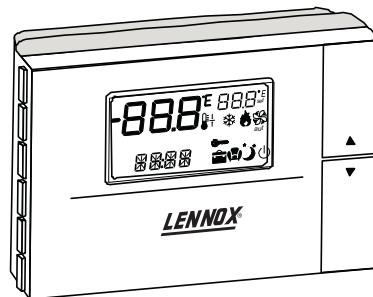

- 1- **Standard unit version, supplied with two wires connection digital thermostat.**
- 2- **VFC unit version, None thermostat included but, with possibility to install a BMS "building management systems"**

1- Standard unit version, with two wires connection.

Control made up with a printed control board and with a walled terminal thermostat to be placed in the room to be conditioned; with ambient sensor inside the terminal for the regulation of the system.

With LCD display with **alarm visualization, exclusive connection with two wires between terminal thermostat and electrical box** at the unit, possibility to adjust internal parameters, automatic restarting and intelligent defrosting control adapted to ambient conditions and room demand at each moment (for heat pump units)

Digital thermostat corresponding to the standard unit version, with two wires connection.

2- VFC unit version, with possibility to install a BMS "building management systems"

Control made up with a printed control board, automatically restarting and intelligent defrosting control adapted to ambient conditions and room demand at each moment (for heat pump units).

In both unit versions through the voltage free contacts supplied on, lets you to obtain the following functions:

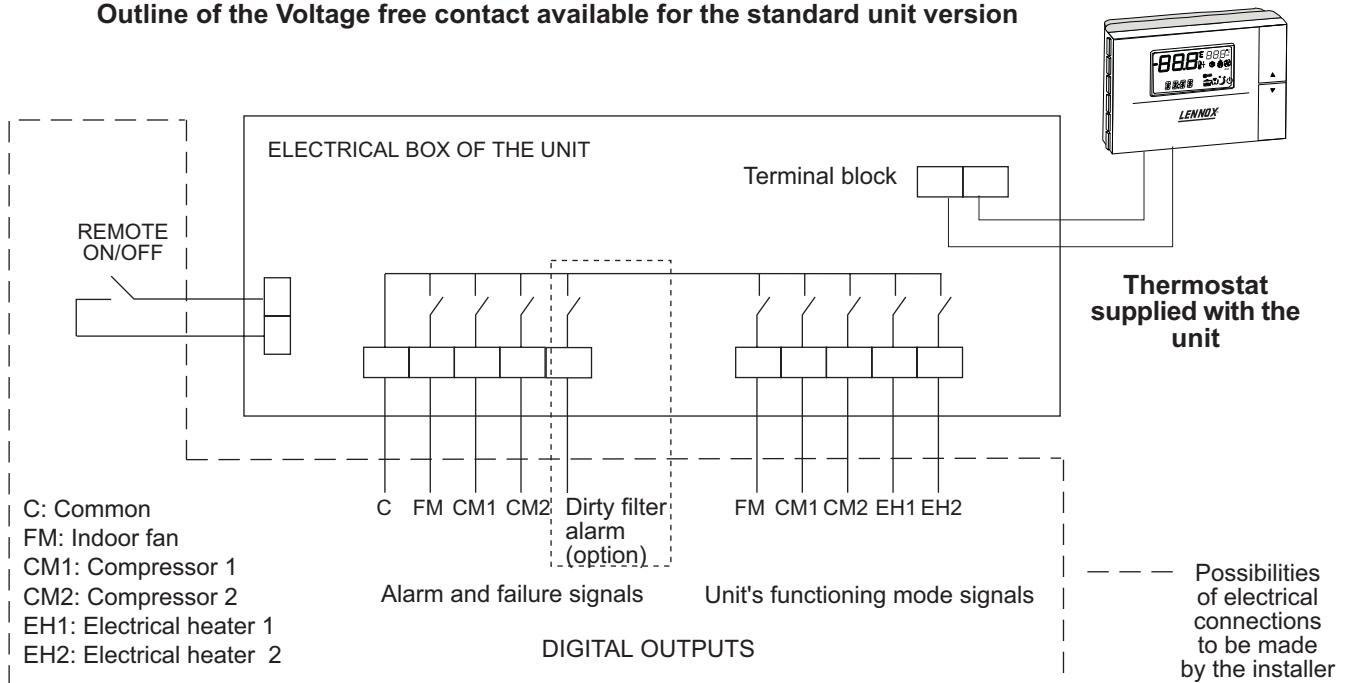

- To obtain the alarm signal of the units such as, fan OFF, compressor OFF...
- To know the unit function MODE; Unit running on fan, cooling or heating mode, compressor ON....

Also the VFC unit version, lets you make the connection from the printed control board at the electrical box of the unit, to manage the signals functioning of the unit, fan, cooling, heating, step 1, step 2 etc... to a BMS system "building management systems", and the connections will be the digital outputs of BMS system.

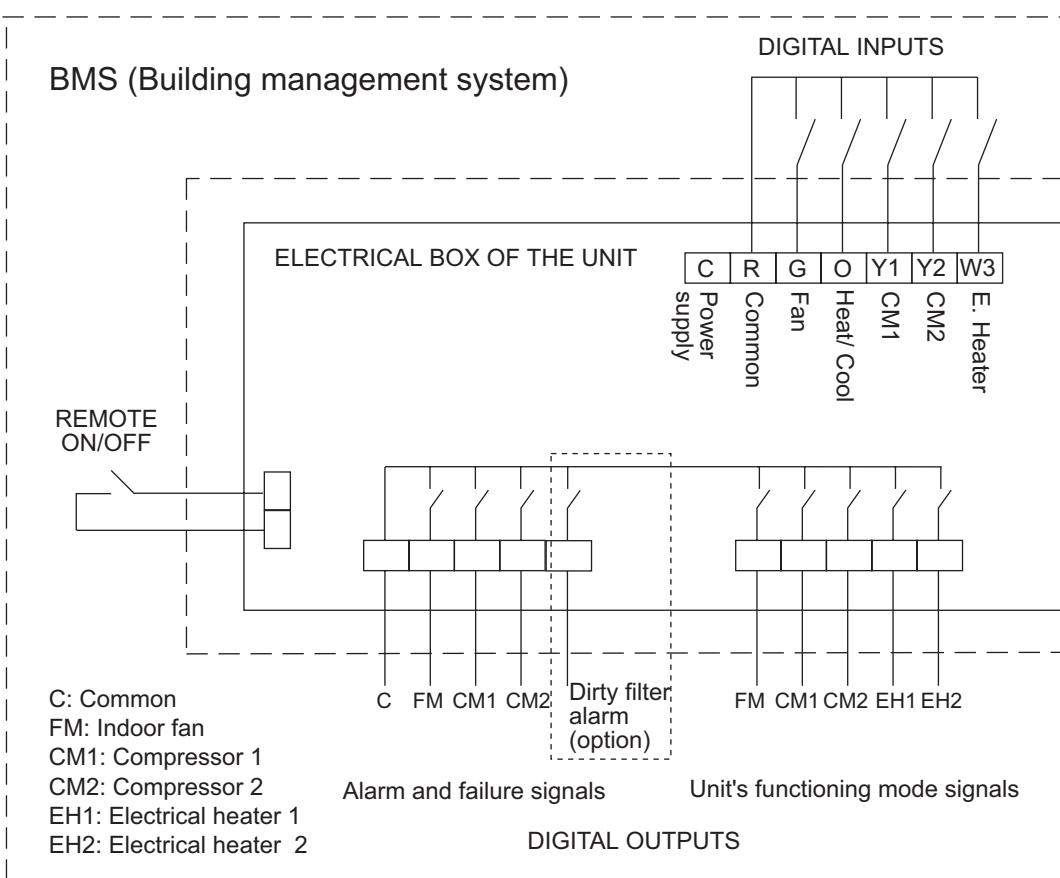

GENERAL DESCRIPTION

The following outlines shows what we explain before, and corresponding of a double circuit units "D". For more details see electrical connections on this manual.

Outline of the Voltage free contact available for the standard unit version

Outline of the Voltage free contact available for the VFC unit version

GENERAL DESCRIPTION

OPTIONS

OPTIONS	STANDARD VERSION	VFC VERSION	Remarks
Condensing pressure control ON/OFF	X	X	Crank case heater included in cooling only units
Proportional condensing pressure control	X	X	Crank case heater included in cooling only units.
Main switch only for 400V-III	X	X	
Return lock three phases	X	X	
"Soft starter" 400V-III	X	X	only for 400V-III units.
Hot gas bypass	X	X	
Condenser coil guard	X	X	
Precoated coil	X	X	
Rubber dampers	X	X	
Compressor isolation	X	X	
Kit low noise	X	X	Proportional CPC and compressor isolation included.
Service valves	X	X	
Refrigerant factory precharged	X	X	Service valves included.
Programmable thermostat	X	X	
Non-Programmable thermostat	STD	X	
Ambient remote sensor kit	X	X	
Duct remote sensor kit	X	X	
Electrical heater	X	X	Electrical heater is not available for heat pump double circuit units ("D") with thermostatic freecooling.
Hot water coil	X	X	Not available for 86D models.
Kit freecooling thermostatic without extract fan supplied with sensor incorporated in the thermostat	X	NO	Thermostatic freecooling supplied with sensor incorporated inside the thermostat. Double circuit heat pump units "D", can not include electrical heater.
Kit freecooling thermostatic with extract fan supplied with sensor incorporated in the thermostat	X	NO	Thermostatic freecooling supplied with sensor incorporated inside the thermostat. Double circuit heat pump units "D", can not include electrical heater.
Kit freecooling enthalpic without extract fan supplied with duct sensor	NO	X	Enthalpic freecooling supplies with duct sensor.
Kit freecooling enthalpic with extract fan supplied with duct sensor	NO	X	Enthalpic freecooling supplies with duct sensor.
Kit sensor incorporated at thermostat for freecooling	STD	X	Option for freecooling
Kit duct sensor for freecooling	X	STD	Option for freecooling
Kit ambient sensor for freecooling	X	X	Option for freecooling
Kit high static pressure indoor unit to 400 Pa	X	X	
Dirt filter indication	X	X	
Smoke detector	X	X

(1) The above data shows noise levels **without** isolation for compressor (standard unit)

(2) The above data shows noise levels **with** isolation for compressor (optional)

(3) The above data shows noise levels **with** Kit "low noise" (optional)

- Global sound power level measured in compliance with ISO standard 3744 and under Eurovent certification program.
- Sound pressure in dB(A) calculated at 10 m, in a free field on a reflecting surface, is given as a guide only and with a directivity of +/- 3 dBA.
- Only the sound power spectrum and the global sound power value are used in determining pressure characteristics on site.
- The above data shows noise levels of standard unit and unit with compressor isolation when unit's fan is working on cooling or heating mode at maximum speed.
- The above data shows noise levels of unit with Kit "low noise" when cooling only units, or heat pump units (on cooling mode) are working with outdoor temperatures of 35°C, because on heating mode the Kit "low noise" is disabled.

TRANSFORMATION OF AIR DISCHARGE

UNITS MODELS LECK-LEHK 24E-32E-38E-43E

STANDARD AIR DISCHARGE

OPTIONAL AIR DISCHARGE

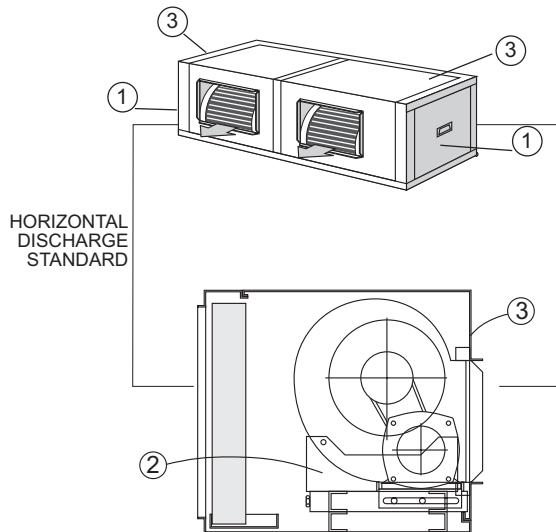

- 1 Check that unit is electrically disconnected.
- 2 Unscrew and remove side covers (1) and (3).
- 3 Loosen the transmission belts and disassemble them.
- 4 Remove the pulley from the fan axle.
- 5 Remove the fan and their supports (2).
- 6 Turn the fan until horizontal discharge position is reached.
- 7 Replace the fan on the supports (2) which should not be moved.
- 8 Place the pulley on the fan axle on the side which coincides with the motor, assemble the belts and align them.
- 9 Tense the belts correctly.
- 10 Replace the upper and lateral covers and screw them down (1) and (3).

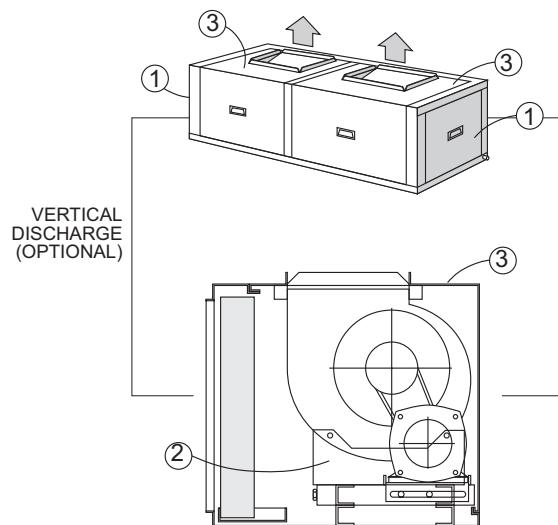

TRANSFORMATION OF AIR DISCHARGE

UNITS MODELS LECK-LEHK 48D-64D-76D-86D

STANDARD AIR DISCHARGE

OPTIONAL AIR DISCHARGE

1 Check that unit is electrically disconnected.

2 Unscrew and remove side covers (1) and (3).

3 Loosen the transmission belts and disassemble them.

4 Remove the pulley from the fan axle.

ATTENTION!! Models 86D: unscrew the bottom bedplate.

5 Remove the fan and its supports (2).

6 Turn the fan until horizontal discharge position is reached.

7 Replace the fan on the supports (2) which should not be moved.

ATTENTION!! Models 86D: screw the bottom bedplate.

8 Place the pulley on the fan axle on the side which coincides with the motor, assemble the belts and align them.

9 Tense the belts correctly.

10 Replace the upper and lateral covers and screw them down (1) and (3).

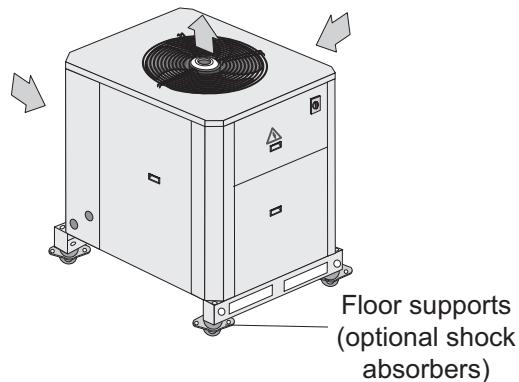

OUTDOOR UNIT INSTALLATION

UNIT LOCATION

- The bedplate is made up of metal channels, capable of withstanding the weight of the units.

- If the unit is floor mounted, then the profiles should be isolated with shock absorbing material such as anti-vibration or pads. Keep in mind that fans rotate at approximately 850 rpm.

UNIT INSTALLED ON SHOCK ABSORBERS

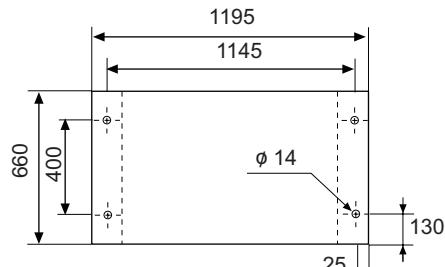

- The unit is able to work in normal radioelectronics conditions for commercials and residential installations. For any other conditions please consult.

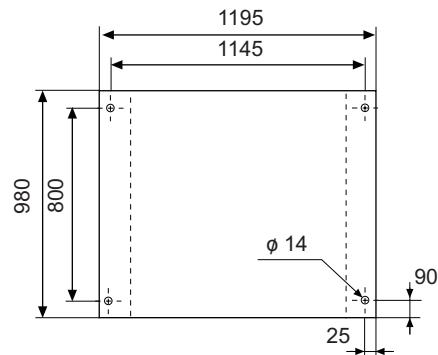

- If the outside temperature in the area where the heat pump unit is to be installed is low or the cycle functioning are too long, it may necessary to install an electrical heater, below the likely coils on the drip tray, which avoids the causing of ice in the coil during defrost cycle.

MOUNTING PLATES

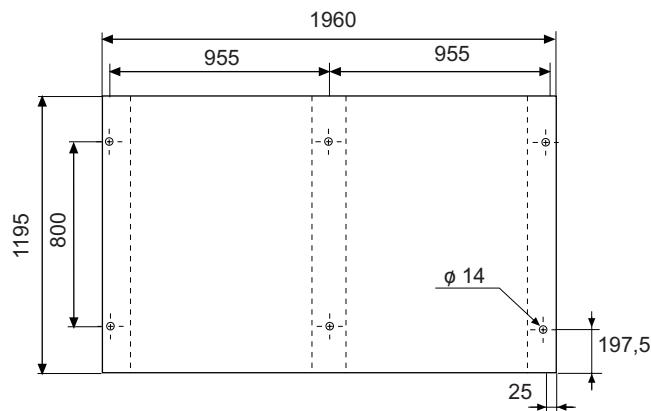

MODEL 24E

MODELS 32E-38E-43E

MODELS 48D-64D-76D-86D

sizes in mm

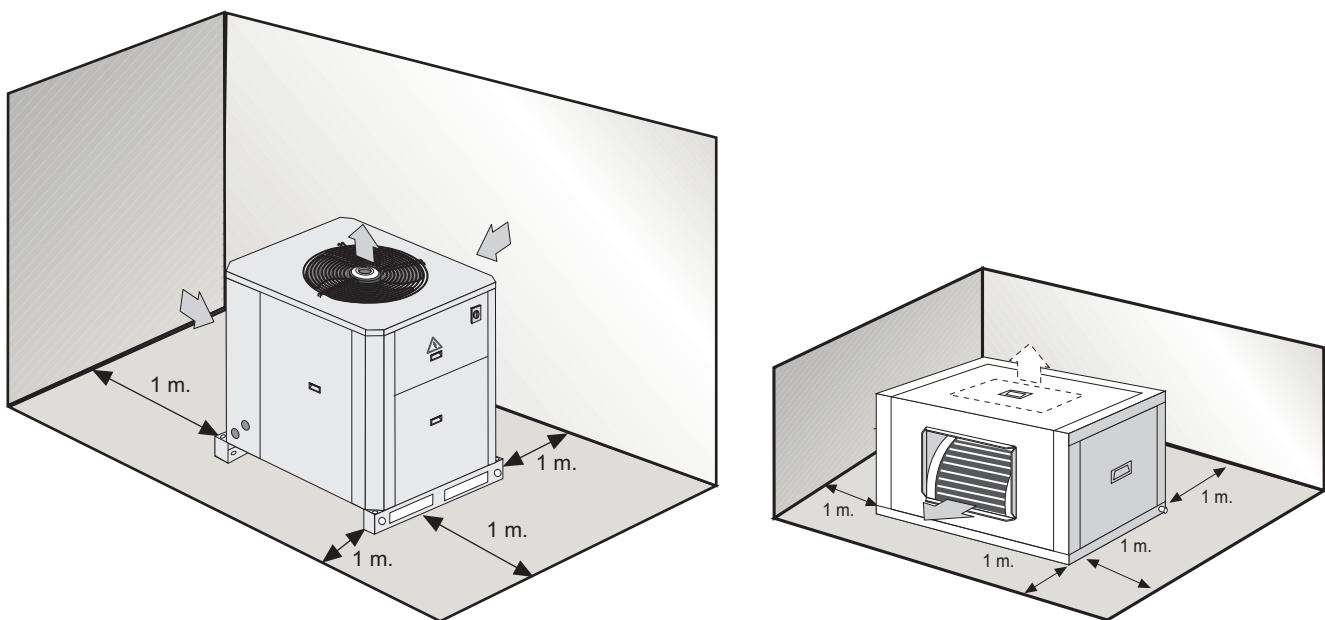

OUTDOOR UNIT INSTALLATION

INSTALLATION CLEARANCES

Clearance around the unit for service and maintenance.

SERVICE SPACE

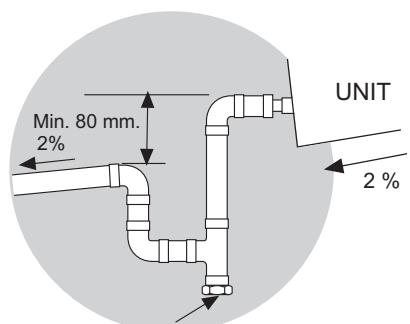

Space should be left free for access or servicing, to ease the installation of cables, drainage connections, electric installation and cleaning filters, as well as easy access to the unit.

DRAINS (INDOOR UNIT)

All the indoor sections have a 3/4" steel threaded drain pipe welded to the condensation tray.

Drainage pipes will be fitted for each tray through a siphon with a height difference of 80 mm. to avoid drainage problems from the depression formed by the fans. The pipes should have an inclination of 2% to ease drainage of condensation.

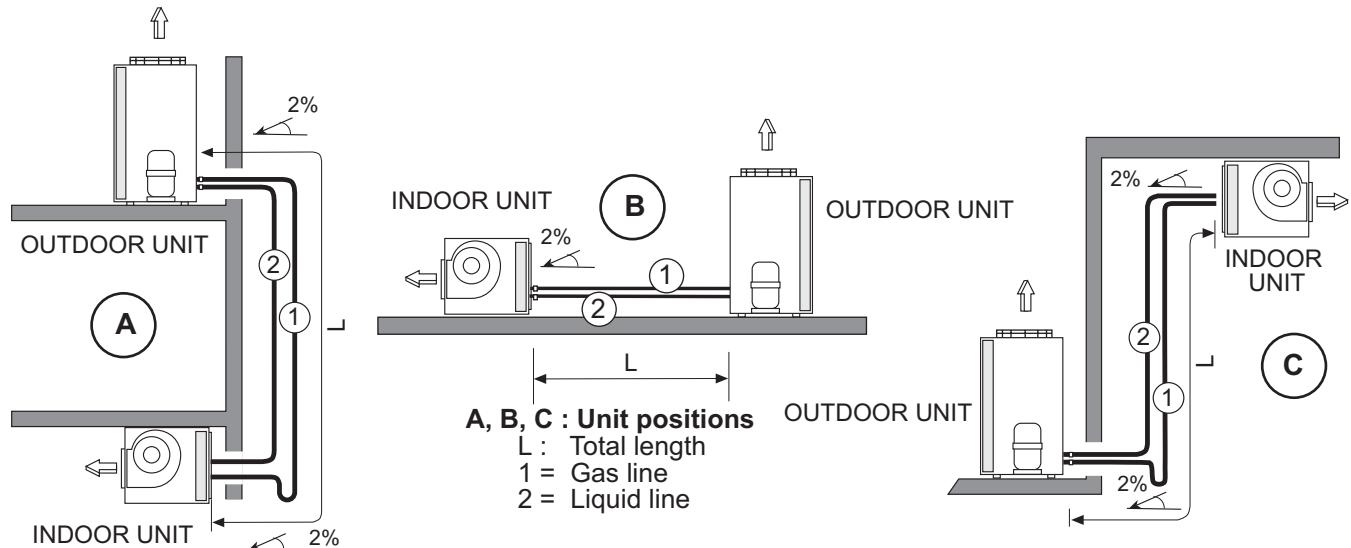

Inspection and cleaning stopper.

Also slightly tip the unit (2%) toward the drainage side. Check that the condensation trays are clean and free from dirt and other debris from the works and that water drains correctly.

REFRIGERANT CONNECTIONS

To locate the outdoor and the indoor units, refer to the following information:

POSITION A : A siphon suction must be installed on the vertical line of the gas line, and siphons must be installed every 8 meters upward. The minimum speed suction must not be below 6m/s.

POSITION B : Tip the lines toward the outdoor unit. **Make special attention to line length longer than 10m, and avoid collapse on pipe lines installation.**

POSITION C : Install a siphon at the base of the vertical of the gas line, no more siphons are necessary.

TABLE 1: REFRIGERANT LINES SELECTION

Maximum number of bends			12	12	12	12	12	12	12	12		

NOTE: The units are supplied with welded connections. As an option, service valves are available for liquid and gas lines.

Liquid service valve

Gas service valve

- THE GAS LINE ALWAYS MUST BE INSULATED

- THE HORIZONTAL LINES MUST BE TIPPED AT LEAST 2% TOWARD THE OUTDOOR UNIT

- THE MAXIMUM SPEED INSIDE LINES, SHOULD NOT BE MORE THAN 15 m/sec.

Between lengths of 30 and 50 m or superior, you have to make a recalculation according to our technical commercial department or distribution itself to maintain certain aspects how to make the installation (additional charge of oil, solenoid valves etc...)

PRECAUTIONS TO BE TAKEN IN THE USE OF R-407C Refrigerant:

R-407C Refrigerant is used in the unit; therefore, the following precautions characteristic of this gas should be taken:

- The Vacuum Pump must have a Check Valve or Solenoid Valve.
- Pressure Gauges and Hoses for the exclusive use with R-407C Refrigerant should be used.
- The charge should be carried out in the Liquid Phase.
- Always use scales to weight-in charge.
- Use the Leak Detector exclusive for R-407C Refrigerant.
- Do not use mineral oil, only synthetic oil to ream, expand or make connections.
- Keep pipes wrapped before using them and be very thorough about any possible dirt (dust, filings, burrs, etc.).
- When there is a leak, gather what is left of the charge, create a vacuum in the unit and completely recharge with new R-407C Refrigerant.
- Brazing should always be carried out in a nitrogen atmosphere.
- Reamers should always be well sharpened.

REFRIGERANT CONNECTIONS

Indoor and outdoor units are factory pre-charged with Nitrogen (N₂). The installer should remove this gas and charge the units with refrigerant R-407C shown on the following tables

The unit is supplied as standard with welded connections. As an option, factory pre-charged kit is available. If so, TABLE 2 is the only to take care about (this option includes service valves).

TABLE 2: WEIGHT OF REFRIGERANT R-407C PER METER OF LINE

CHARGE OF REFRIGERANT FOR THE SET:

EXAMPLE:

To install a KNHK 32E + LEHK 32E set, with a 22m refrigerant line length between outdoor and indoor unit, then the refrigerant charge must be calculated as follow:

1st The TABLE 2 shows, that for 22m of line length between indoor unit and outdoor unit, the line sizes are: liquid 3/4", and gas 1-3/8".

2nd TABLE 2 shows, for line sizes of 3/4"- 1-3/8", the charge per meter line is: 232 gr/m.

3rd TABLE 3.1. shows, charge of refrigerant for the set with 0m of line length is 9300 gr.

4th To determine the charge of the set:

Add charge of the refrigerant lines + charge of refrigerant indoor unit and outdoor unit.

$$\text{Total charge for the set: } (232 \text{ gr/m}) \times 22 \text{ m} + 9300 \text{ gr} = 14404 \text{ gr}$$

Note: if the outdoor unit includes factory pre-charged kit, only take care of weight of refrigerant per meter of line in TABLE 2.

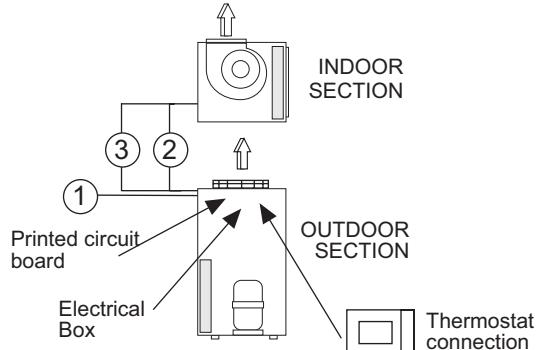

ELECTRICAL CONNECTION

- BEFORE MAKING ANY ELECTRICAL CONNECTIONS, BE SURE THAT ALL CIRCUIT BREAKERS ARE OPEN.
- IN ORDER TO CARRY OUT THE ELECTRICAL CONNECTIONS, FOLLOW THE ELECTRICAL DIAGRAM SUPPLIED WITH THE UNIT.

FOR UNIT MODELS:

**24E-32E-38E-43E
48D-64D-76D-86D**

- ① Power supply.
- ② Indoor motor fan electrical connection.
- ③ Electrical heater connection (optional).

ELECTRICAL CONNECTION

CONTROL PANEL

ELECTRICAL CONNECTION DIGITAL THERMOSTAT, FOR STANDARD UNIT VERSION

IMPORTANT
**THE SHIELDED CONNECTION CABLE BETWEEN THE CONTROL PANEL AND THE UNIT
MUST BE SEPARATE FROM ANY OTHER TYPE OF ELECTRICAL WIRING.
CONNECT IT TO THE ELECTRIC BOX LOCATED IN THE OUTDOOR UNIT.**

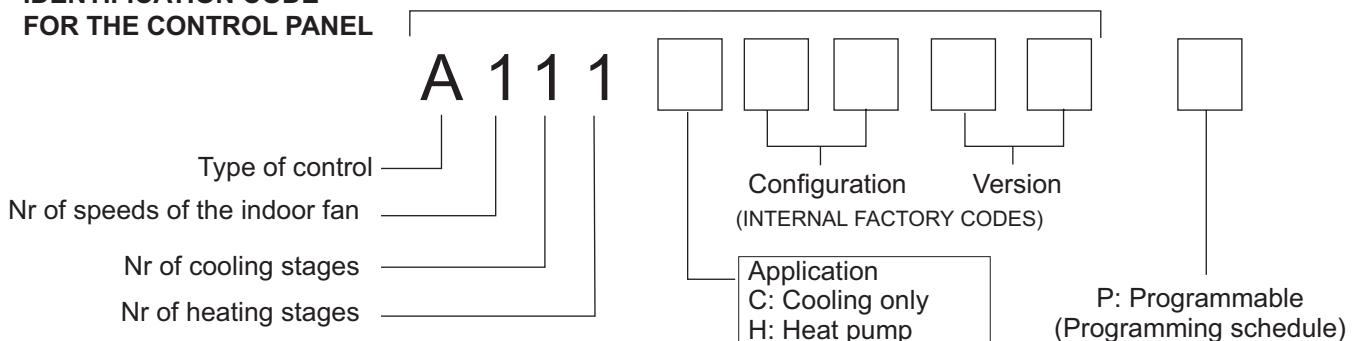

- For securing and connecting the Control Panel, consult the control Panel Manual supplied with the unit.
- Keep in mind that the Control Panel cable is a SHIELDED CABLE and the wire mesh is only grounded through the electric box.
- The T+ and T- polarity must strictly agree with the electrical diagram supplied with the unit.

Since this type of control panel is factory-configured for each application, an identification code located on the control plate of the terminal itself has been given to each panel.
Any query or request for a replacement of the control panel must be accompanied by this identification code.

IDENTIFICATION CODE FOR THE CONTROL PANEL

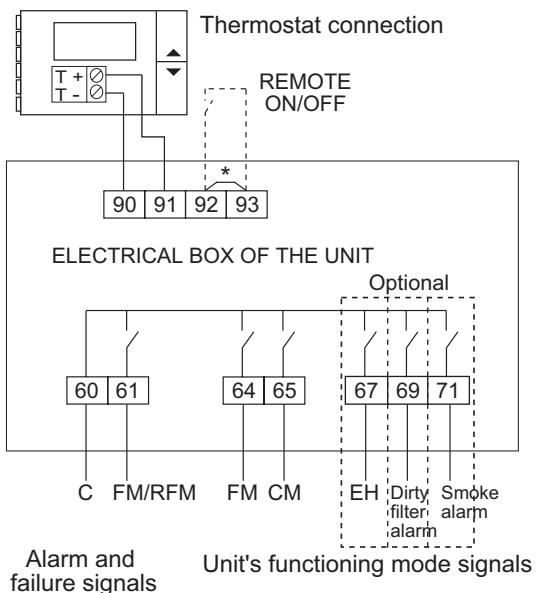

ELECTRICAL CONNECTION

ELECTRICAL CONNECTION "REMOTE SIGNALS"

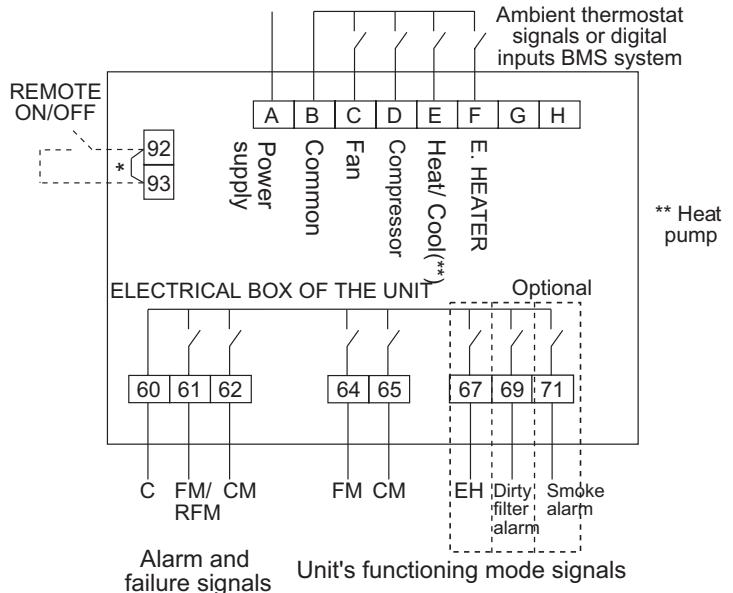

The electrical box of all the range, lets you obtain the following functions:

- Remote ON / OFF.
- Alarm and failure signals for the unit's components: FM, CM.
- The unit's functioning mode signals: FM, CM, EH.
- Dirty air filter indication (option).
- Manage the unit operation, through the supplied thermostat or through the digital inputs for a BMS system (only for VFC unit version).

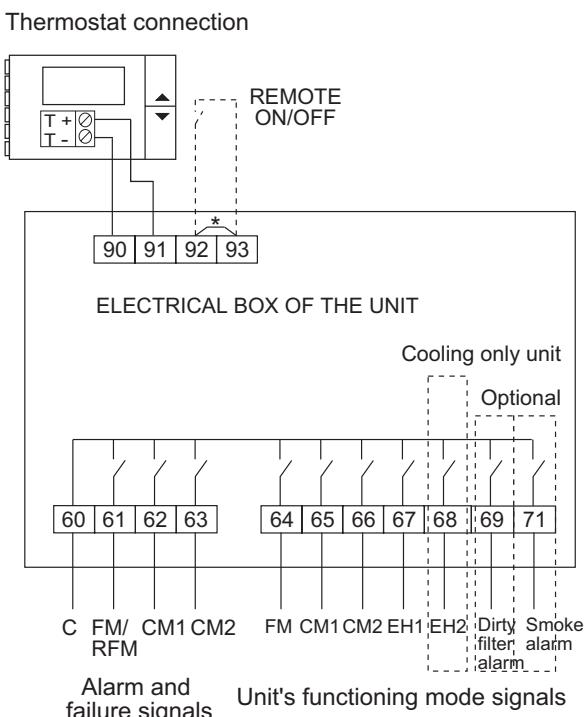

SINGLE CIRCUIT UNIT, STANDARD VERSION

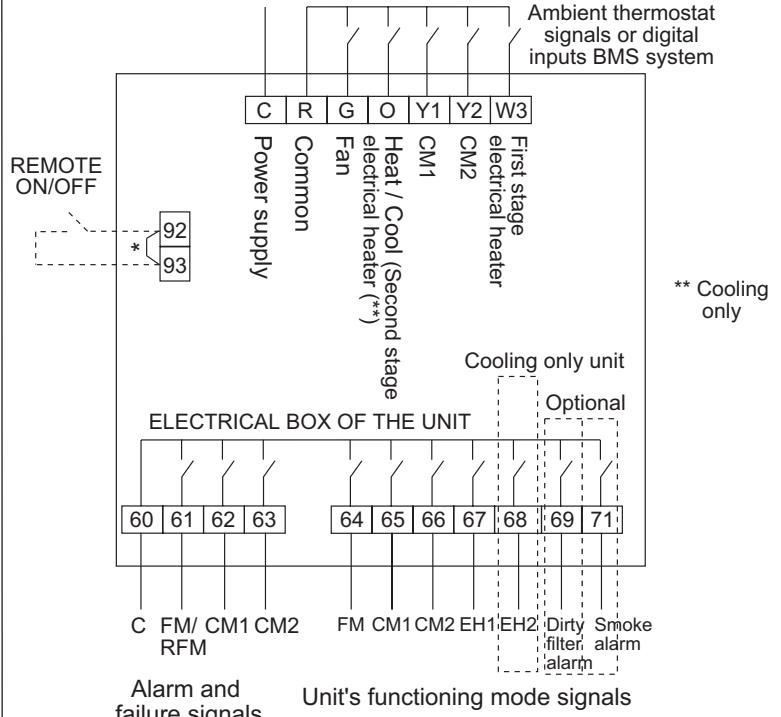

SINGLE CIRCUIT UNIT, VFC VERSION

DOUBLE CIRCUIT UNIT, STANDARD VERSION

DOUBLE CIRCUIT UNIT, VFC VERSION

C: Common

FM: Indoor fan

CM: Compressor

CM1: Compressor 1

CM2: Compressor 2

EH1: Electrical heater 1

EH2: Electrical heater 2

When unit switches off, the system will show CM, CM1 and CM2 failure signal.

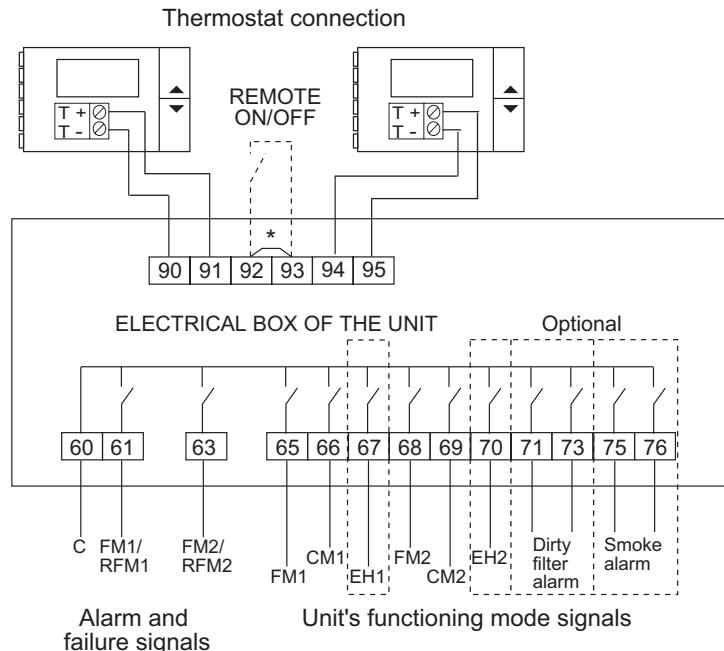

* Remove wire, if ON/OFF remote is used.

Compressor alarm may indicate thermic CM, CFM, High pressure, Low pressure.

(*) With hot gas bypass kit or proportional CPC (options)

DB.- Dry Bulb Temperature
WB.- Wet Bulb Temperature

OPTIONS

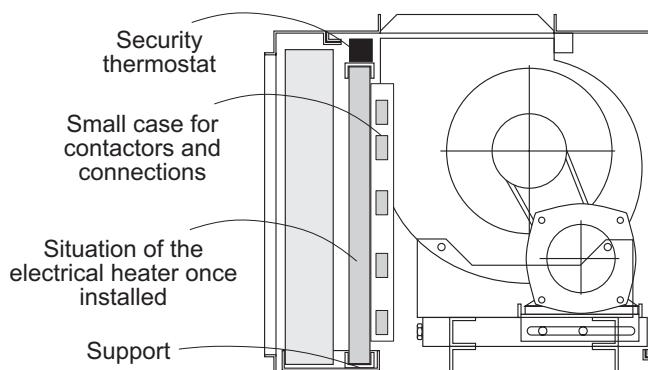

ELECTRICAL HEATER

Made of aligned shielded elements, supplied mounted on the unit as drawing shows.

All the range has three security elements: 2 security thermostats, one automatic, other manual reset, and an air flow security pressostat, which makes the electrical heater stop when air flow is not enough.

The electrical heater must be supplied from the unit's electrical box.

An small case on the electrical heater protects contactors and electrical connections.

WEIGHTS Kg (*)	10			10		20				30	
STAGES	1			1		1				1	

(*) Add to the unit's weight.

DIRTY FILTER INDICATION

To be installed on the indoor unit.

Based on an air flow security pressostat which detects the available static pressure through the air filter.

In case the filters are dirty, the detector is activated showing an alarm, only if the fan is ON.

MAIN SWITCH

The main switch is located on the access panel to the electrical box of the outdoor unit (except 86D models).

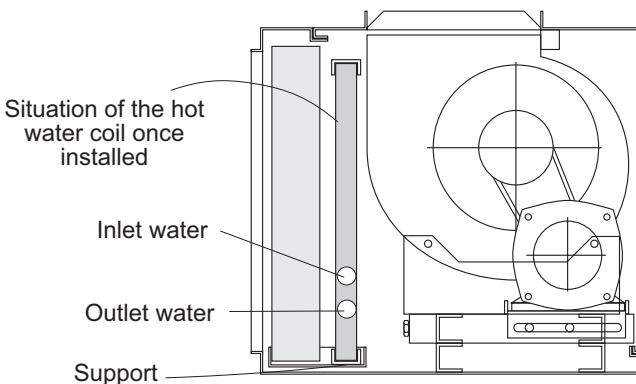

The main switch is equipped with a clutch gadget, which allows opening the panel of the electrical box, when it is on OFF position.

Verify that the main switch is large enough to handle the current for the unit if electric heaters are installed.

OPTIONS

HOT WATER COIL

The hot water coil consists of a refrigerating coil made of copper tubing, with aluminum swirl fins with inlet and outlet water connections. It is supplied mounted inside the unit as picture shows.

MODELS LEC / LEH INDOOR UNIT (CAPACITY IN W)	DIFFERENCE IN TEMPERATURES BETWEEN HOT WATER INTAKE AND THE AIR WHICH ENTERS THE COIL			WATER FLOW L/H	WATER COIL PRESSURE DROP Kpa	AIR PRESSURE DROP Pa (*)	Nr ROWS	WEIGHT Kg	OUTLET WATER DIAMETER Inches

(*) Nominal air flow volume

PHASE SEQUENCER

The phase sequencer is located in the electrical box in the outdoor section, thus assuring that the unit will not begin operation while the phase connection of the compressor is not correct. Should this occur, then just switch two phase connections.

ON/OFF CONDENSATION PRESSURE CONTROL (outdoor unit)

The condensation pressure control consists of one or two pressure switches, which starts and stops the outdoor fan, regulating the condensation temperature; thus the unit will be able to operate in the cooling cycle when the outdoor temperature is below 19°C (until 0°C).

It includes crankcase heater for cooling only units. The purpose of the heater is to keep the oil in the compressor at the correct temperature while the compressor is stopped, so that it can be properly lubricated when starts again. When the unit is operating at low outdoor temperatures (below 19°C), it is advisable to fit a crankcase heater.

PROPORTIONAL CONDENSING PRESSURE CONTROL (outdoor unit)

It is an element which regulates outdoor fan speed, in order to control condensation temperature. Thus, the unit will be able to operate in the cooling cycles when the outdoor temperature is below 19°C (until -10°C). This kit includes crankcase heater for cooling only units.

COMPRESSOR STARTING CURRENT CONSTRAINED (“SOFT STARTER”) 400V-III (outdoor unit)

It is an electronic element, which reduces the peak compressor starting current up to 40% (see pages of electrical data without soft starter).

MODELS (OUTDOOR UNIT)	WEIGHTS (*)
24E-32E-38E-43E	3
48D-64D-76D-86D	6

(*) Add to the unit's weight.

KIT MORE STATIC PRESSURE OF AIR DISCHARGE (indoor unit)

It is an specific fan to obtain more available static pressure up to 400 Pa for indoor unit. See air flow data section for optional fan performances.

Electrical data for these optional fans:

MODELS LEC / H (INDOOR)	24E	32E	38E	43E	48D	64D	76D	86D

WEIGHTS Kg (*)	0	2	0	0	5	9	9	0

(*) Add to the unit data

OPTIONS

HOT GAS BYPASS VALVE (outdoor unit)

The purpose of the BYPASS valve is to let the unit operate at low outdoor temperatures (until -10°C), to be used in cooling only and heat pump units in cooling cycle.

It regulates the capacity of the compressor by injecting hot gas from the compressor discharge side to the coil.

CONTROL USING A PROGRAMMABLE CONTROLLER

With the programmable controller option, the desired temperature can be programmed in the area 24 hours a day, 7 days a week.

REMOTE AMBIENT SENSOR AND REMOTE DUCT SENSOR

These sensors may be used in conjunction with remote controller or allowing the controller to be mounted in a room away from the conditioned space.

REMOTE DUCT SENSOR:

The sensor will be located in the return-air duct, detecting the air temperature of the air being air-conditioned.

REMOTE AMBIENT SENSOR:

The sensor will be placed in the area to be air-conditioned.

CONDENSER COIL GUARD (outdoor unit)

The condenser coil protection grill prevents light damage to the coil when shipping and when installed.

It cannot protect against very heavy impacts.

PRECOATED COIL (outdoor unit)

Special protection of the aluminum condenser coil fins, to protect it from aggressive external environmental conditions.

RUBBER DAMPERS (outdoor unit)

To install under the unit to avoid transmission of vibrations to the floor where unit is installed, while unit is operating.

COMPRESSOR ACOUSTIC JACKET (outdoor unit)

Each compressor is fitted with a compressor acoustic jacket this provides attenuation of the compressor noise that radiates from the unit when in operation.

KIT LOW NOISE

With this kit, each compressor is fitted with a compressor acoustic jacket and also includes proportional pressure control, which through a special regulation decreases the fan speed and provides attenuation of sound level.

Regulation used on cooling mode with outdoor temperatures below 35°C. See page 17 for Noise level performances.

SMOKE DETECTOR

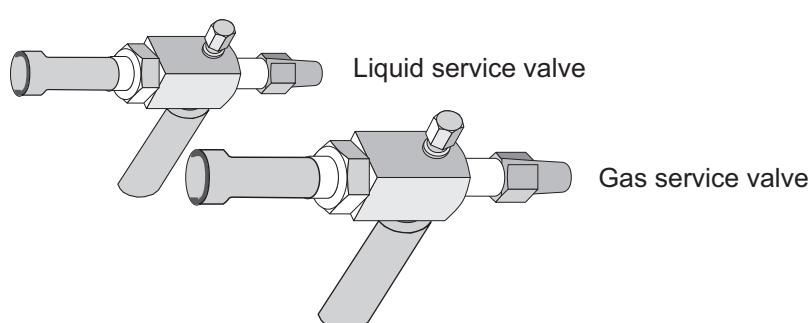

Located downstream of the filter, the ionic head of the smoke detector can detect any type of smoke. In this case it would initiate shutdown sequence the unit, fully close the return air damper and open the fresh air damper up to 100% and send an alarm signal to the unit.

R-407C REFRIGERANT FACTORY PRECHARGED (outdoor unit)

This option includes service valves and R-407C refrigerant charged in outdoor unit (for 0 meters of connection lines).

SERVICE VALVES (outdoor unit)

The unit is fitted with gas and liquid service valves, in order to make easier installation and maintenance operations.

OPTIONS

FREECOOLING

1.- DEFINITION

FREE-COOLING is a saving system in the Cooling cycle, this makes the unit take air from the outside to take advantage of its energy, this system acting as a first cold stage.

It is a saving energy system, that is why many countries regulations recommend and others put under an obligation to install a freecooling system with the unit.

2.- TYPES OF FREECOOLING

According to outside air parameters which have to be measured, the types are:

- **Thermostatic freecooling:**

Measures and compares the outside air temperature with the temperature of the room that has to be conditioned.

- **Enthalpic freecooling:**

Measures and compares the outside air enthalpy with the return air enthalpy from the room that has to be conditioned. The enthalpy measures temperature and humidity of air.

3.- COMPONENTS OF FREECOOLING

The main components are:

-Electronic control and accessories: Their function is to detect the outside and indoor air conditions through the probes, deciding when freecooling should operate.

-The servomotor and system transmission: They manage the opening and closing of dampers.

-Adjustable dampers.

-Mixing section: Where outside and return air are mixed.

Also an extra fan is available, which applies an additional static pressure on the suction and return air duct.

For more details about components and drawings see pages 50 to 53.

4.- OPERATION

The control compares the values of temperature/enthalpy between outside air and room air through the probes, if it is a negative difference and the security elements allow (discharge temperature probes) then the control acts over the servomotor, which produces the opening of the outside damper and close the return one, entering cool outside air to the room.

The damper regulation is proportional.

If indoor air demand is not great, could be enough only the freecooling to condition the room, if the air demand is greater it is possible need the freecooling working and the unit working on different cooling mode stages.

5.- THERMOSTAT TERMINAL

Depends on the type of freecooling selected, the thermostat and the electrical box supplied with the unit will be different.

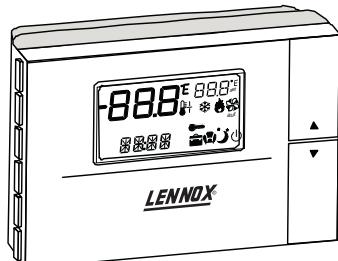

With thermostatic freecooling the thermostat supplied has the same characteristics than the one supplied with the standard unit, except because the one for the freecooling is a programmable one.

With enthalpic freecooling the terminal is different than the one supplied with the unit VFC version, its principal characteristics are: OFF, COOL, HEAT, AUTOMATIC.

THERMOSTAT FOR THERMOSTATIC FREECOOLING

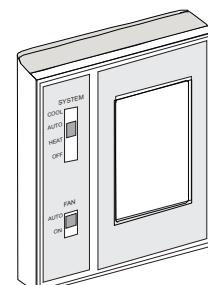

Thermostatic freecooling is supplied with sensor incorporated inside the thermostat.

Remote duct and ambient sensor are available as an option.

THERMOSTAT FOR ENTHALPIC FREECOOLING

Enthalpic freecooling is supplied with duct sensor. Remote ambient sensor and sensor incorporated inside the thermostat are available as an option.

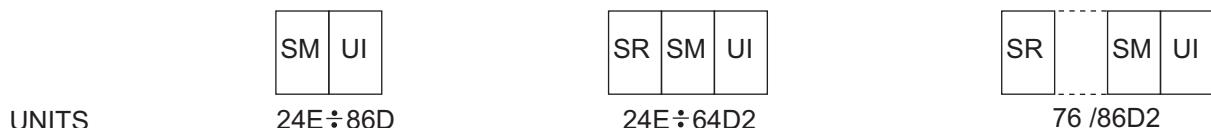

OPTIONS

FREECOOLING

6.- SUPPLY AND INSTALLATION

The freecooling system could be supplied mounted or loose.

Configuration of freecooling supply :

SM: Mixing section

SR: Extra fan section

UI: Indoor unit.

UE: Outdoor unit.

The electrical box for the enthalpic freecooling is supplied apart, and has to be fixed by the installer.

7.- FREECOOLING WITH EXTRA FAN

If an extra static pressure is required on the return air duct, the freecooling should add an extra fan section. This extra fan section includes a discharge damper.

The operation dampers for this freecooling with extra fan is as follow:

As much as the air intake damper opens, that much the by-pass damper closes and the discharge air damper opens, for the air return suction (see drawing in page 52).

This means that at the same time reach a free cooled of the room, the discharge or return air and the air of the room gets removable.

The consumption of the extra fan by unit is:

- (*) AVAILABLE STATIC PRESSURE PA
 (●) WRONG STATUS ON ACCOUNT OF MOTOR POWER LIMIT.

NOTE: The unit leaves factory with pulley two turns opened.

OPTIONS

FREECOOLING

8.- SELECTION OF THE UNIT AND FREECOOLING SYSTEM

There are different types of freecooling system, different possibilities of dampers installations, and it could be supplied mounted or loose.

In order to provide the customer the needed one, fill in the following table and send it to the order department:

INSTALLER COMPANY NAME: _____
TEL.: _____ Fax _____ e-mail _____

CONTACT PERSON NAME: _____

ATTENTION TO : Lennox Refac S.A.

CONTACT PERSON NAME: _____

TEL.: _____ Fax _____ e-mail _____

ORDER NUMBER: _____

A- Select the unit needed: split or multi-split:

(The freecooling will be supplied mounted on the indoor unit, except for the freecooling with extra fan on models 76D-86D, which is supplied loose).

Split

Multi-split

C.-Select the type of thermostatic or enthalpic freecooling and the sensor for freecooling management.

Thermostatic freecooling supplied with sensor incorporated inside the thermostat; Enthalpic freecooling supplied with duct sensor. (If the humidity conditions where the unit is going to be install have relevance, is convenient to install an enthalpic freecooling)

Thermostatic Remote ambient sensor
Remote duct sensor

Enthalpic Remote ambient sensor
Sensor incorporated at the thermostat

D.- Select if you need extra fan with the freecooling

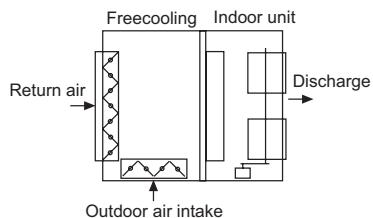

With extra fan

Without extra fan

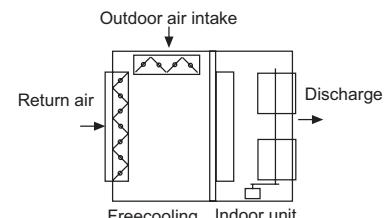

E.-Select the dampers configuration for the freecooling, as following. (In order to be adapted to the ducts of the installation)

E.1- Dampers position of the dampers on for freecooling WITHOUT extra fan:
The drawings are an upper view of the indoor unit and freecooling
