

LENNOX® solarmate™ SINGLE PACKAGE HEAT PUMPS CHP9 SERIES — HORIZONTAL — 50 Hz

* 6.2 to 14.7 kW (21 200 to 50 000 Btu/h) Cooling Capacity
 * 6.2 to 15.6 kW (21 200 to 53 100 Btu/h) Heating Capacity
 7.7 to 27.6 kW (26 300 to 94 200 Btu/h) Optional Electric Heat

*At ARI Standard 240 Test Conditions

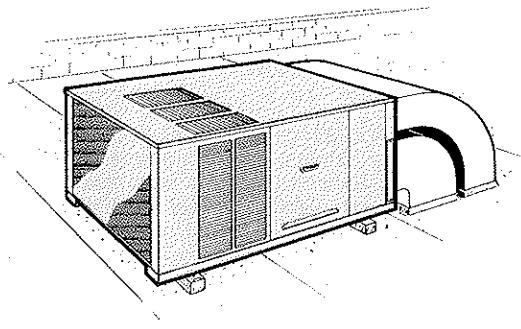

CHP9 UNIT
(With optional POWER SAVER®
duct enclosure and mounting frame)

High Performance Heat Pump Units Feature Low Operating Cost And Energy Conservation

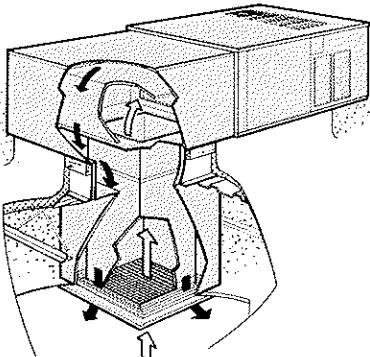

Lennox single package *solarmate* T.M. heat pump units are designed for residential or small commercial installations. Four models are offered with a wide and varied heating-cooling capacity range. Units can be installed with ducts extended through a wall in a crawl space, basement, utility room or attic. Installation on a slab at grade level or on a rooftop will save valuable interior floor space. Optional accessories available for rooftop installations include a duct enclosure and roof mounting frame. The mounting frame mates to the bottom of the CHP9 and duct enclosure and when flashed into the roof permits weatherproof duct connection and entry into the conditioned area. Optional POWER SAVER® and controls field install in duct enclosure to reduce cooling operating costs and satisfy any local code fresh air requirements. Externally mounted optional minimum fresh air damper (manual) is also available. In addition, a supply and return plenum, fiberglass duct kit and choice of flush or step-down diffusers are available for a complete combination ceiling supply and return air distribution system. The compact outdoor

single package units contain all refrigeration components (indoor and outdoor unit), air movers, air filters and optional additive electric heat in one complete package. Optional electric heaters are available in several sizes to supplement the heating capacity, space is provided in the unit for simple field installation. Indoor supply and return air openings are both at the same end of the cabinet. Outdoor air outlet is located at the opposite end. Outdoor coil air enters the unit through louvered top panel and both side panels. Powerful direct drive fan(s) discharges air through the outdoor coil quietly and efficiently. Multispeed indoor blower provides a choice of supply air flow. Large indoor and outdoor coils ensure maximum air contact and heat transfer. Cabinet is constructed of heavy gauge galvanized steel with a baked-on enamel finish. Units are shipped completely assembled, piped, pre-wired and pre-charged ready to install. In addition, units are test operated at the factory. Installer has only to locate unit, connect duct work, mount thermostat and make power supply connections to complete a low cost installation.

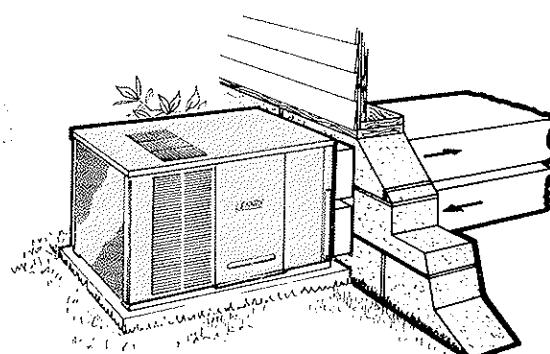

Typical Applications

Rooftop
installation

Rooftop installation with optional RT9 duct enclosure
and combination ceiling supply and return air system.

Unit on slab
at grade level

FEATURES

Rugged Cabinet — Constructed of heavy gauge hot dipped galvanized steel. A five station wash metal preparation assures a perfect bonding surface for the finish coat of baked-on outdoor enamel. The attractive enamel finish gives the cabinet long lasting protection from the weather. Indoor coil section of the cabinet is lined with thick fiberglass insulation. Removable panels permit complete service access to interior of cabinet. Heavy gauge steel support rails under the base elevates unit above mounting surface away from damaging moisture. Indoor coil drain pan is constructed of heavy gauge galvanized steel with a galvanized pipe (mpt) drain outlet. Drainage outlets are furnished in the outdoor coil section of the base. Electrical inlets are furnished in cabinet for wiring entry.

Duct Connections — Conditioned supply and return air openings are located one above the other on one end of the cabinet. Return air enters in the lower opening through the indoor coil and is discharged out the top opening. Both openings have flanges for ease of connecting duct work.

Refrigeration System — Complete factory sealed refrigeration system consists of: compressor, outdoor coil and fan(s), indoor coil and blower, reversing valve, hi-capacity drier, suction and discharge line service gauge ports, high pressure switch (manual reset), low pressure switch (automatic reset), suction line accumulator, check valve, solid-state defrost control, low temperature control, refrigerant lines connected and a full operating charge of refrigerant.

Compressor and Controls Compartment — Compressor and control box are located in a separate compartment of the cabinet, isolating them from the weather and also keeping the sound level at a minimum. Control box is conveniently located for service access with all controls factory installed and wired. Cabinet access panel removal permits complete access to the compartment.

Dependable and Quiet Compressor — Rugged and reliable compressor is hermetically sealed. Suction cooled, overload protected and equipped with internal pressure relief valve. Internally protected from excessive current and temperature. A crankcase heater is furnished as standard equipment and provides protection from slugging. The running gear is spring mounted within the sealed can. In addition the compressor is installed on resilient rubber mounts in the unit, assuring quiet and vibration free operation.

Large Indoor and Outdoor Coils — Lennox designed and fabricated coils are constructed of precisely spaced ripple-edged aluminum fins machine fitted to copper tubes. Design of coil provides large surface and contact area for maximum efficiency. Fins are strengthened to resist bending which can restrict air flow and reduce efficiency. Fins are equipped with collars that grip tubing for maximum contact area resulting in excellent heat transfer. Flared shoulder tubing joints and silver soldering provide tight leak proof joints. Coil is thoroughly tested under pressure to insure leak proof construction.

Efficient Outdoor Coil Fan(s) — Powerful direct drive fan(s) moves large air volumes uniformly through the entire coil resulting in high refrigerant cooling capacity. CHP9-260 and 410 models are equipped with a single fan. CHP9-513 and 653 models employ dual fans. Air enters unit through louvered top and both side panels and is discharged out through the coil. See dimension drawing for air pattern.

Powerful Indoor Blower — Units are equipped with quiet operating direct drive blowers that deliver large air volumes with low power consumption. Each blower is statically and dynamically balanced as an assembly before it is installed in the unit. Multispeed motor is isolated on rubber mounts. A choice of blower speeds is available on each blower. See blower performance charts. Change in blower speed is easily accomplished by a change in wiring.

Cleanable Air Filter — Frame filters are furnished as standard equipment. Media is washable or vacuum cleanable polyurethane, coated with oil for increased efficiency. Use RP products filter coating no. 418 (P-8-5069) when reoiling is required after cleaning. Separate filter access cabinet panel provides quick and easy removal of filter(s) for servicing.

Reversing Valve — Factory installed and piped. Heavy duty valve permits quick changeover from cooling to heating and vice versa.

Flow Control Valve — Factory installed check valve by-passing tubing permits full refrigerant flow during a cooling cycle. On the reverse or heating cycle, the flow is by-passed through the by-pass tubing, thereby increasing the restriction to the flow.

Suction Line Accumulator — Factory installed and piped. Traps and prevents large amounts of liquid refrigerant from flooding directly into the compressor and causing damage on start-ups.

High and Low Pressure Switches — Factory installed and wired. Protects system against abnormal operating conditions. Low pressure reset is automatic, high pressure is manual.

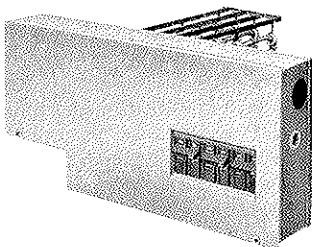

Defrost Control — Solid-state defrost control is factory set and calibrated. It initiates and controls the defrost cycle of the unit by simultaneously sensing the temperature of the coil and the ambient air by means of thermistors. When the coil temperature is reduced, due to frost on the coil, the control initiates a defrost cycle. If weather conditions do not produce frost on the coil, unit operation will not be interrupted by an unnecessary defrost cycle.

Thermostat Furnished — A deluxe wall mounted combination heating-cooling thermostat is furnished as standard equipment. It is equipped with a temperature setting dial, system selector switch, blower switch for automatic or continuous operation and built-in heat and cool anticipation. An emergency heat thermostat subbase is furnished as standard equipment. Subbase permits auxiliary electric heat only to operate in case of compressor malfunction.

Outdoor Thermostat (Optional) — Maintains the heating load on the heat pump as long as possible before allowing the auxiliary electric heat to come on the line. See bulletin in Accessories section.

Timed-Off Control (Optional) — Timed-off control (57A79) is available as optional equipment for field installation. Prevents compressor short-cycling and also allows time for suction and discharge pressure to equalize, permitting the compressor to start in an unloaded condition. Automatic reset control will shut the compressor off and hold it off for 5 minutes.

Additive Electric Heat (Optional) — Available for field installation in 7.7 thru 27.6 kW sizes. See Electric Heat Tables. The helix wound nichrome heating elements are exposed directly in the air stream resulting in instant heat transfer, lower coil temperatures and long service life. The elements are accurately located and insulated from the heavy gauge steel support frame by high quality insulators. 220/240V heaters are equipped with circuit breakers to provide overload and short circuit protection. Must be reset manually. Each set of heating elements is equipped with a accurately located limit control with fixed temperature off setting and automatic reset. In addition, elements have supplemental thermal cutoff safety fuses providing positive protection in case of hazardous overheating. On 220/240V heaters, thermal time delay relay brings the heating elements on and off the line in sequence and equal increments with a time delay between each element. On 380/420V heaters, 3 phase contactors bring the heating elements on and off the line and maintain balanced phase loading. Control box and access cover are constructed of heavy gauge galvanized steel. Electrical inlet holes are provided in the box. Electric heaters are completely factory assembled with all controls installed and wired.

Thoroughly Tested and Approved — Units have been thoroughly tested and rated in the Lennox Research Laboratory environmental test room at ARI Standard 240 conditions. In addition, units have been sound tested in the Lennox reverberant sound test room according to ARI Standard 270 conditions. Units and components within are bonded for grounding to meet safety standards for servicing required by U.L. and NEC. Blower data is from actual unit tests conducted in the Lennox Laboratory air test chamber.

ROOFTOP ACCESSORY EQUIPMENT

Optional Duct Enclosure — The RT9-65 duct enclosure is required for installation of CHP9 units with RMF9-65 roof mounting frame. For CHP9-260 & 410 models an adapter kit (50A46) is required to mate the units to the RT9-65. Duct enclosure is completely insulated and has a baked-on enamel finish. The enclosure is field assembled and secures to roof mounting frame and CHP9 unit. A mounting frame deck enclosure, included with RT9 provides a weatherproof deck for mounting the single package unit on the roof mounting frame. Securing brackets are provided to secure CHP9 unit to roof mounting frame. Supply and return air openings with flanges are provided in bottom of enclosure for connection of supply and return air duct work in double duct applications. For combination ceiling supply and return applications the SRP9-65 plenum must be added to bottom of duct enclosure. Plenum facilitates connection of the supply and return air duct to the ceiling diffuser. Application flexibility is possible with the following options.

RT9-65 Duct Enclosure:

With or Without PSD9-65 POWER SAVER®

- a — With SRP9-65 Combination Supply & Return Plenum
- b — With double duct distribution System

Optional POWER SAVER® — The entire PSD9-65 POWER SAVER control system is factory assembled and wired. The assembly field installs in the RT9-65 enclosure. The Lennox POWER SAVER system consists of: mechanically linked outdoor air and recirculated air dampers with pressure operated exhaust air dampers. The positioning of these dampers is accomplished by a 24 volt modulating spring return damper motor with adjustable minimum damper positioner and controlled by the room thermostat, adjustable mixed air controller, adjustable compressor monitor and adjustable enthalpy control. The enthalpy control senses the total heat content of the outdoor air. This unique control prevents excessive moisture laden outdoor air

that will add to the cooling load from entering the unit and yet permits cool dry air capable of cooling to enter, thus taking full advantage of free outdoor air for cooling. Fresh air intake section is furnished with cleanable polyurethane air filter.

Optional Roof Mounting Frame — The RMF9-65 roof mounting frame is available for mounting the RT9-65 duct enclosure and CHP9 units. Frame provides an automatic weather sealed rooftop installation. Approved by National Roofing Contractors Association.

Optional Combination Supply and Return Plenum — The SRP9-65 combination supply and return plenum adapts the RT9-65 duct enclosure to combination ceiling supply and return applications. The insulated plenum is field assembled and installs to bottom of the duct enclosure.

Optional Combination Supply and Return Diffusers — Lennox offers two different styles of air diffusers. The RTD step-down model extends below ceiling level when installed. The FD model is almost flush with the ceiling when installed. Supply air is discharged through the outside grilles and return air enters through the center grille on both models. Adjustable supply air vanes are available, on both models, for air distribution.

Optional Supply and Return Duct — Supply and return fiberglass duct kit (BM-7820) provides connection of combination supply and return ceiling diffuser. Furnished in nominal 1219 mm (48 in.) lengths and constructed of 25 mm (1 in.) thick fiberglass duct board with an aluminum exterior. Shipped knocked down with the tape, staples and installing instructions for field assembly. See dimension drawings.

Optional Minimum Fresh Air Damper — Minimum fresh air damper mounts external to the RT9-65 duct enclosure. Equipped with manually operated damper and necessary fittings for installing.
